BEFORE

AFTER

BY THE NUMBERS

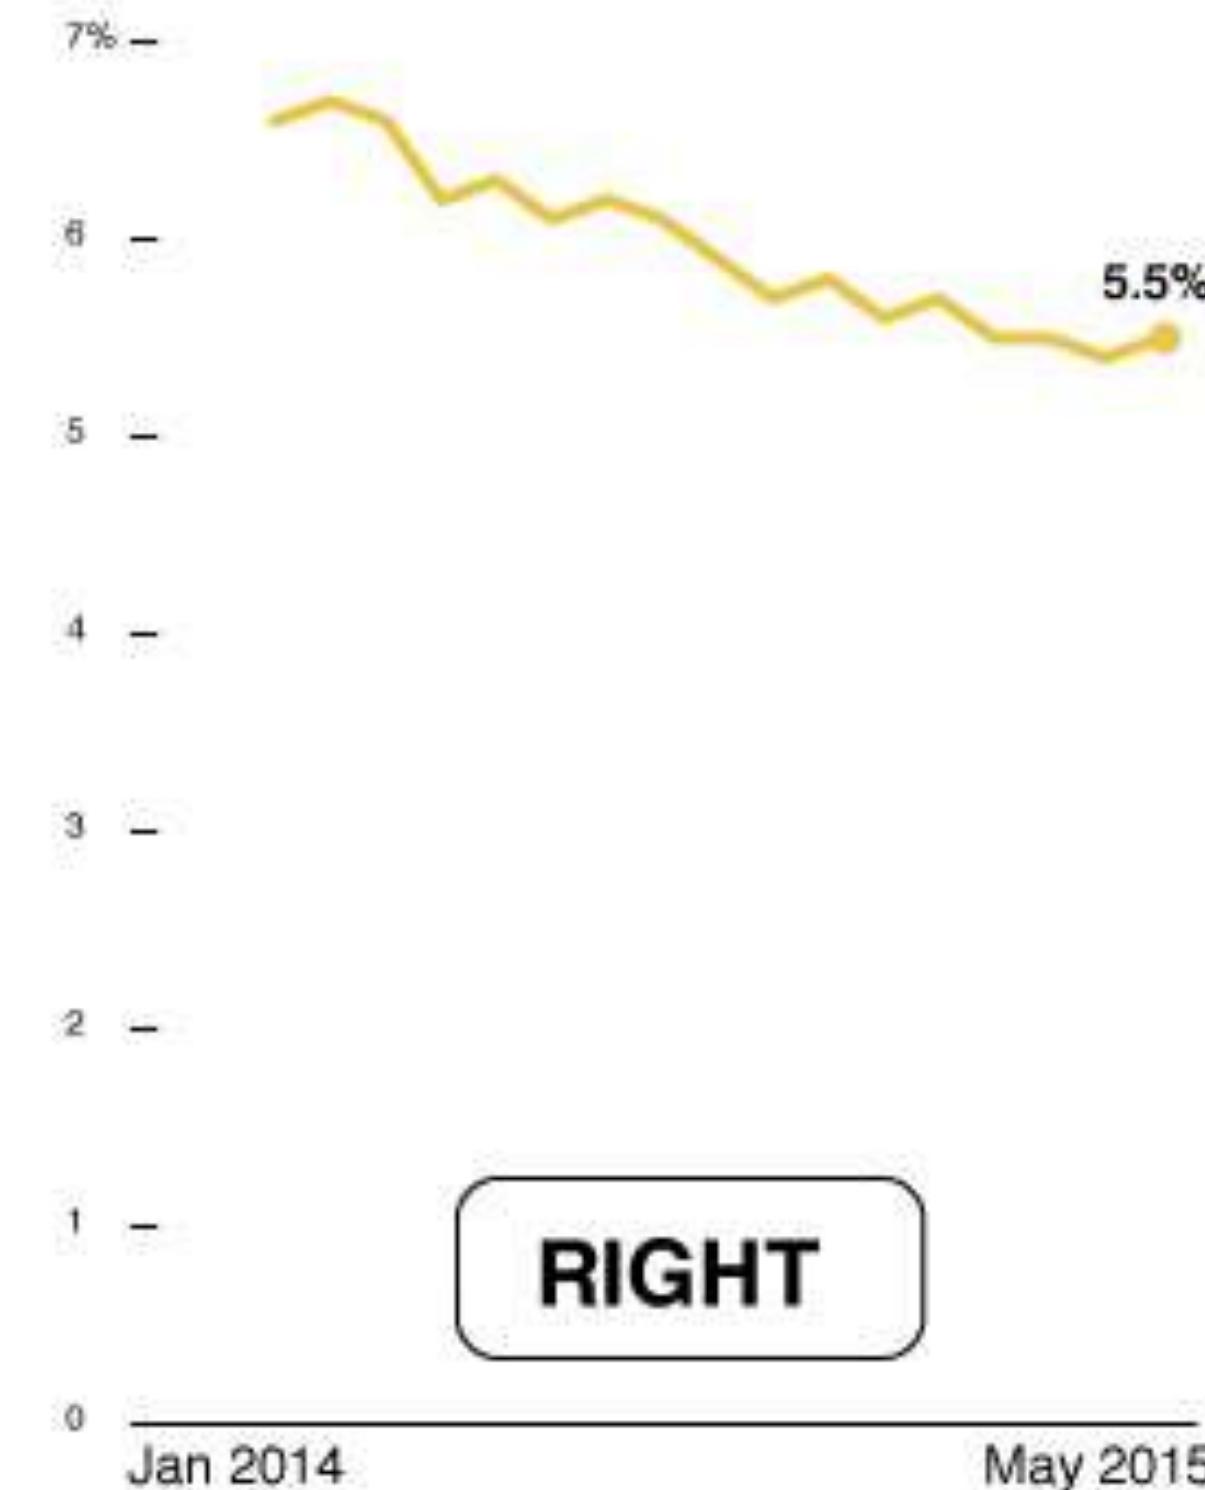

The National Collegiate Health Assessment was taken by 1,000 UCSB students in Spring 2009. Participants were asked how frequently they used substances over the past 30 days. Numbers in white reflect actual student use, while red numbers indicate perceived substance use. The average age of participants was 20 years and approximately 99 percent were full-time students.

US Debt has Exploded

INDOT hopes to begin work in late August. About 9,000 drivers travel through the area daily, according to numbers from 2011, the most recent year available. The announcement follows a July 22, in which an overpass struck the Virginia Avenue bridge, shutting down westbound I-65 and eastbound traffic. Emergency repairs over the weekend have recorded more similar incidents since.

"We want to emphasize that the bridge is structurally safe," said Jason Wessner, INDOT deputy director. "Our goal is to decrease the probability of bridge collapse."

After the bridge closure, Wingfield said, traffic movement will be low-

DIAGRAM OF THE CAUSES OF MORTALITY
IN THE ARMY IN THE EAST.

APRIL 1855 TO MARCH 1856.

2.

APRIL 1854 TO MARCH 1855.

1.

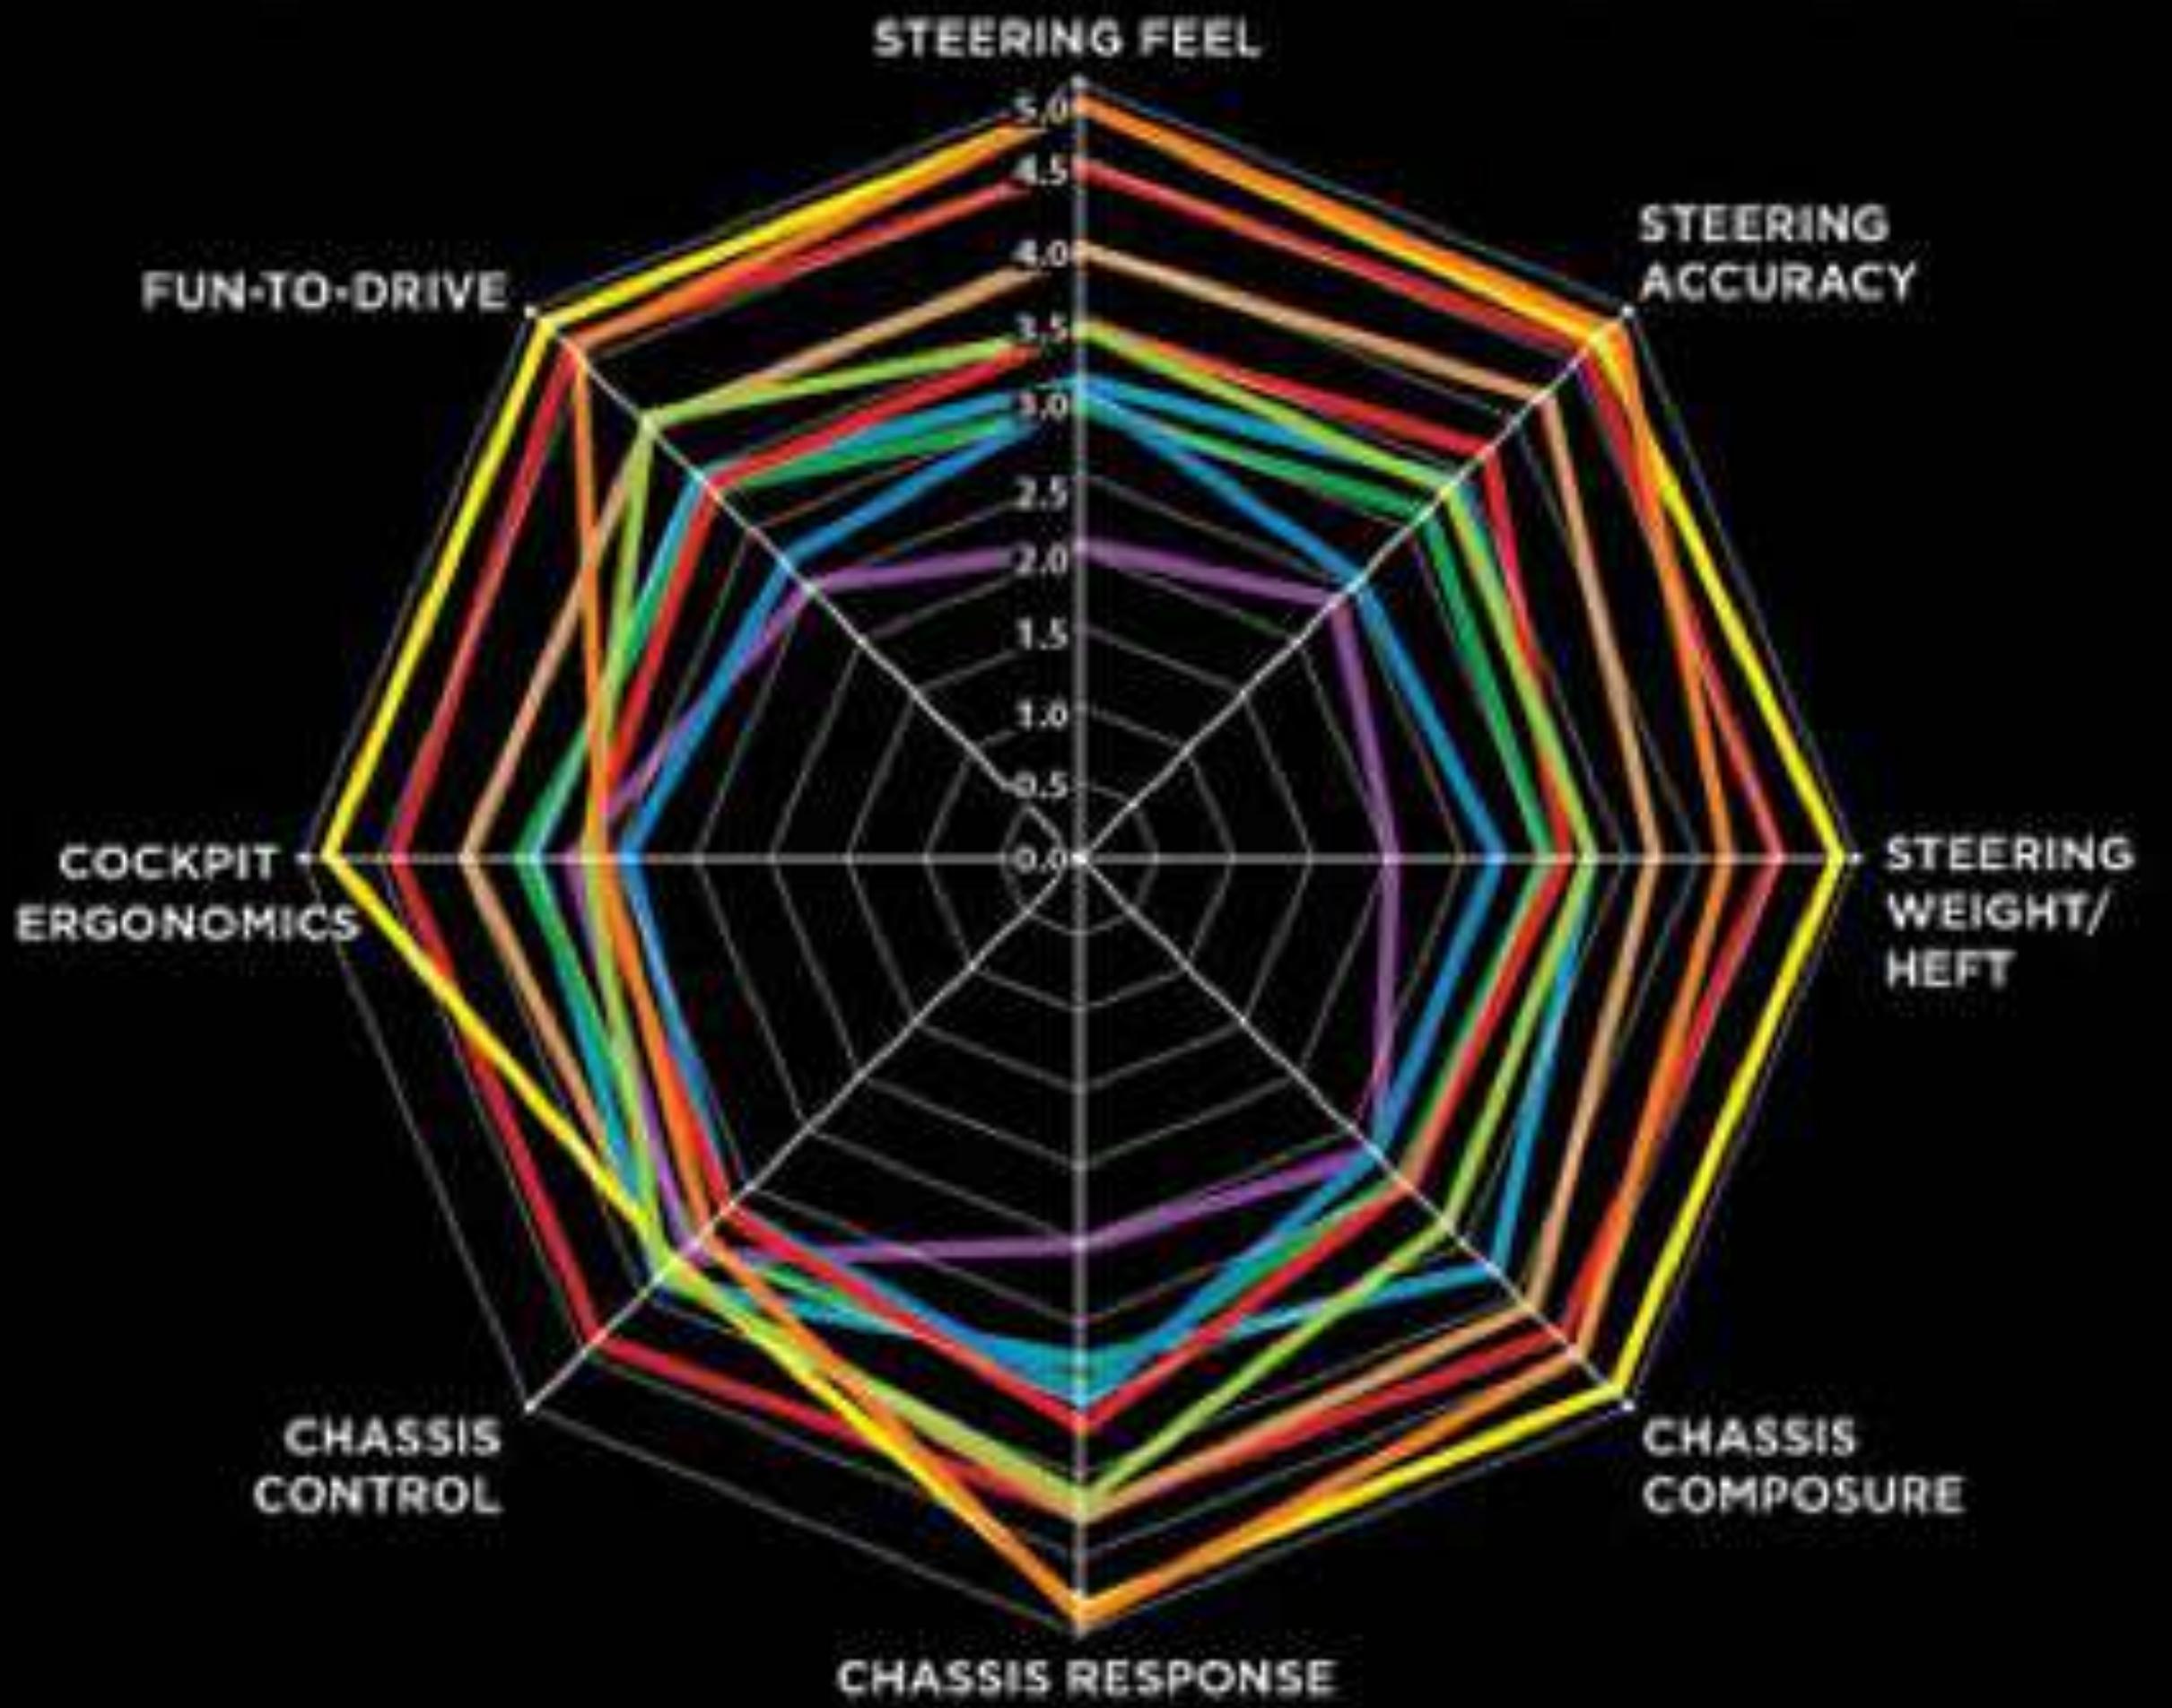

The Areas of the blue, red, & black wedges are each measured from the centre as the common vertex.

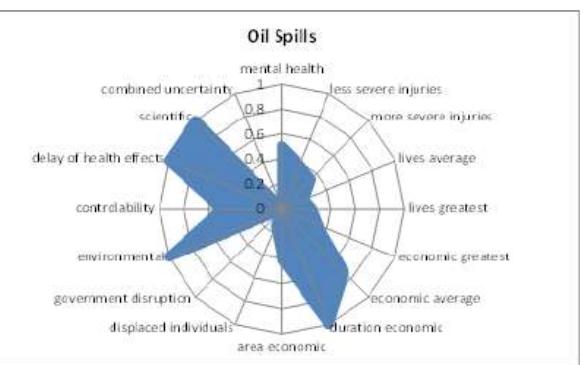

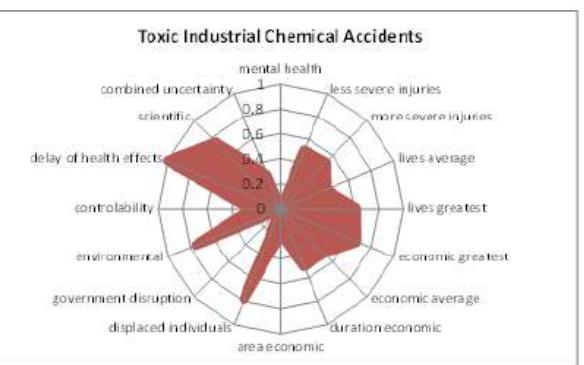

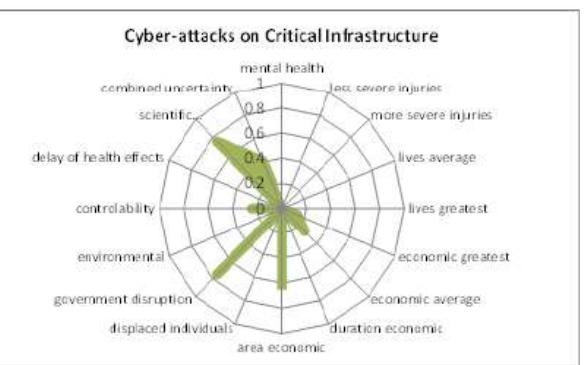

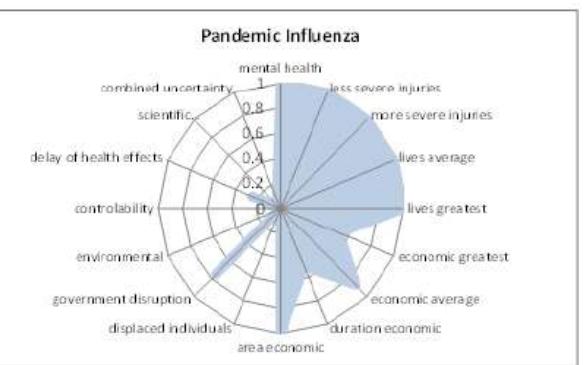

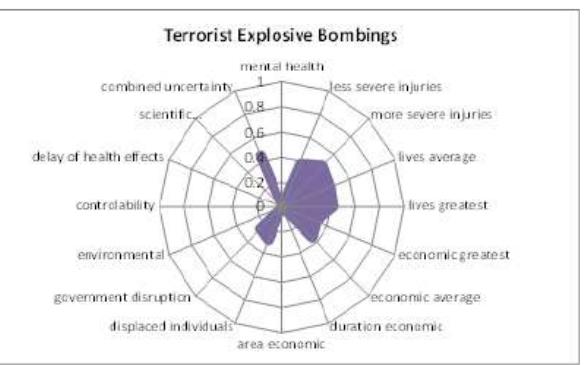

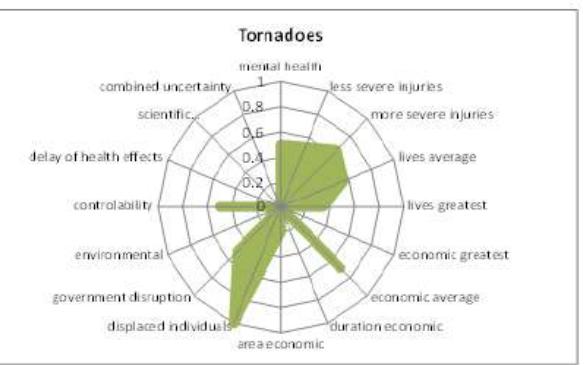

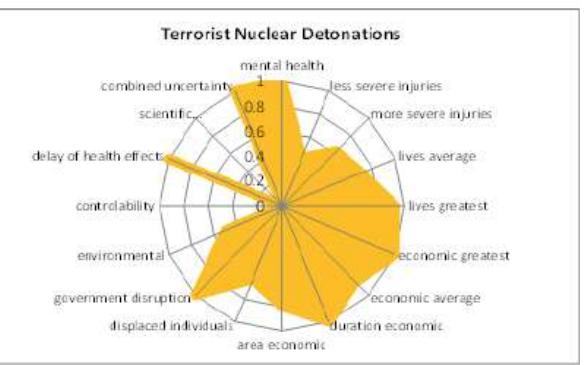

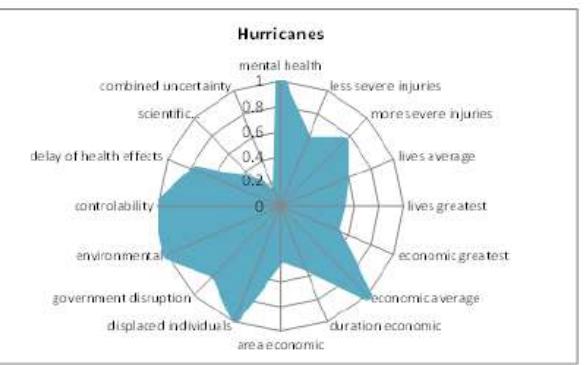

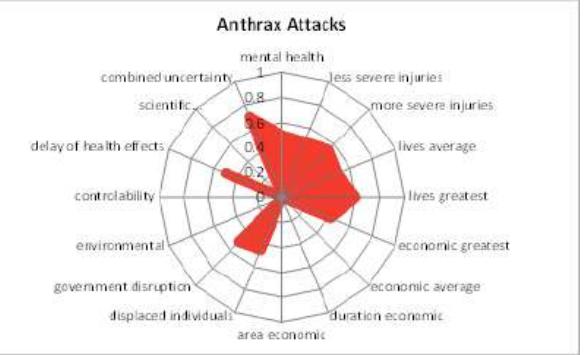

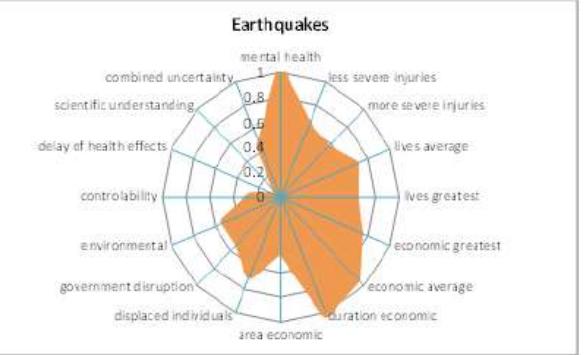

The blue wedges measured from the centre of the circle represent area for area the deaths from Preventible or Mitigable Zymotic diseases; the red wedges measured from the centre the deaths from wounds; & the black wedges measured from the centre the deaths from all other causes.

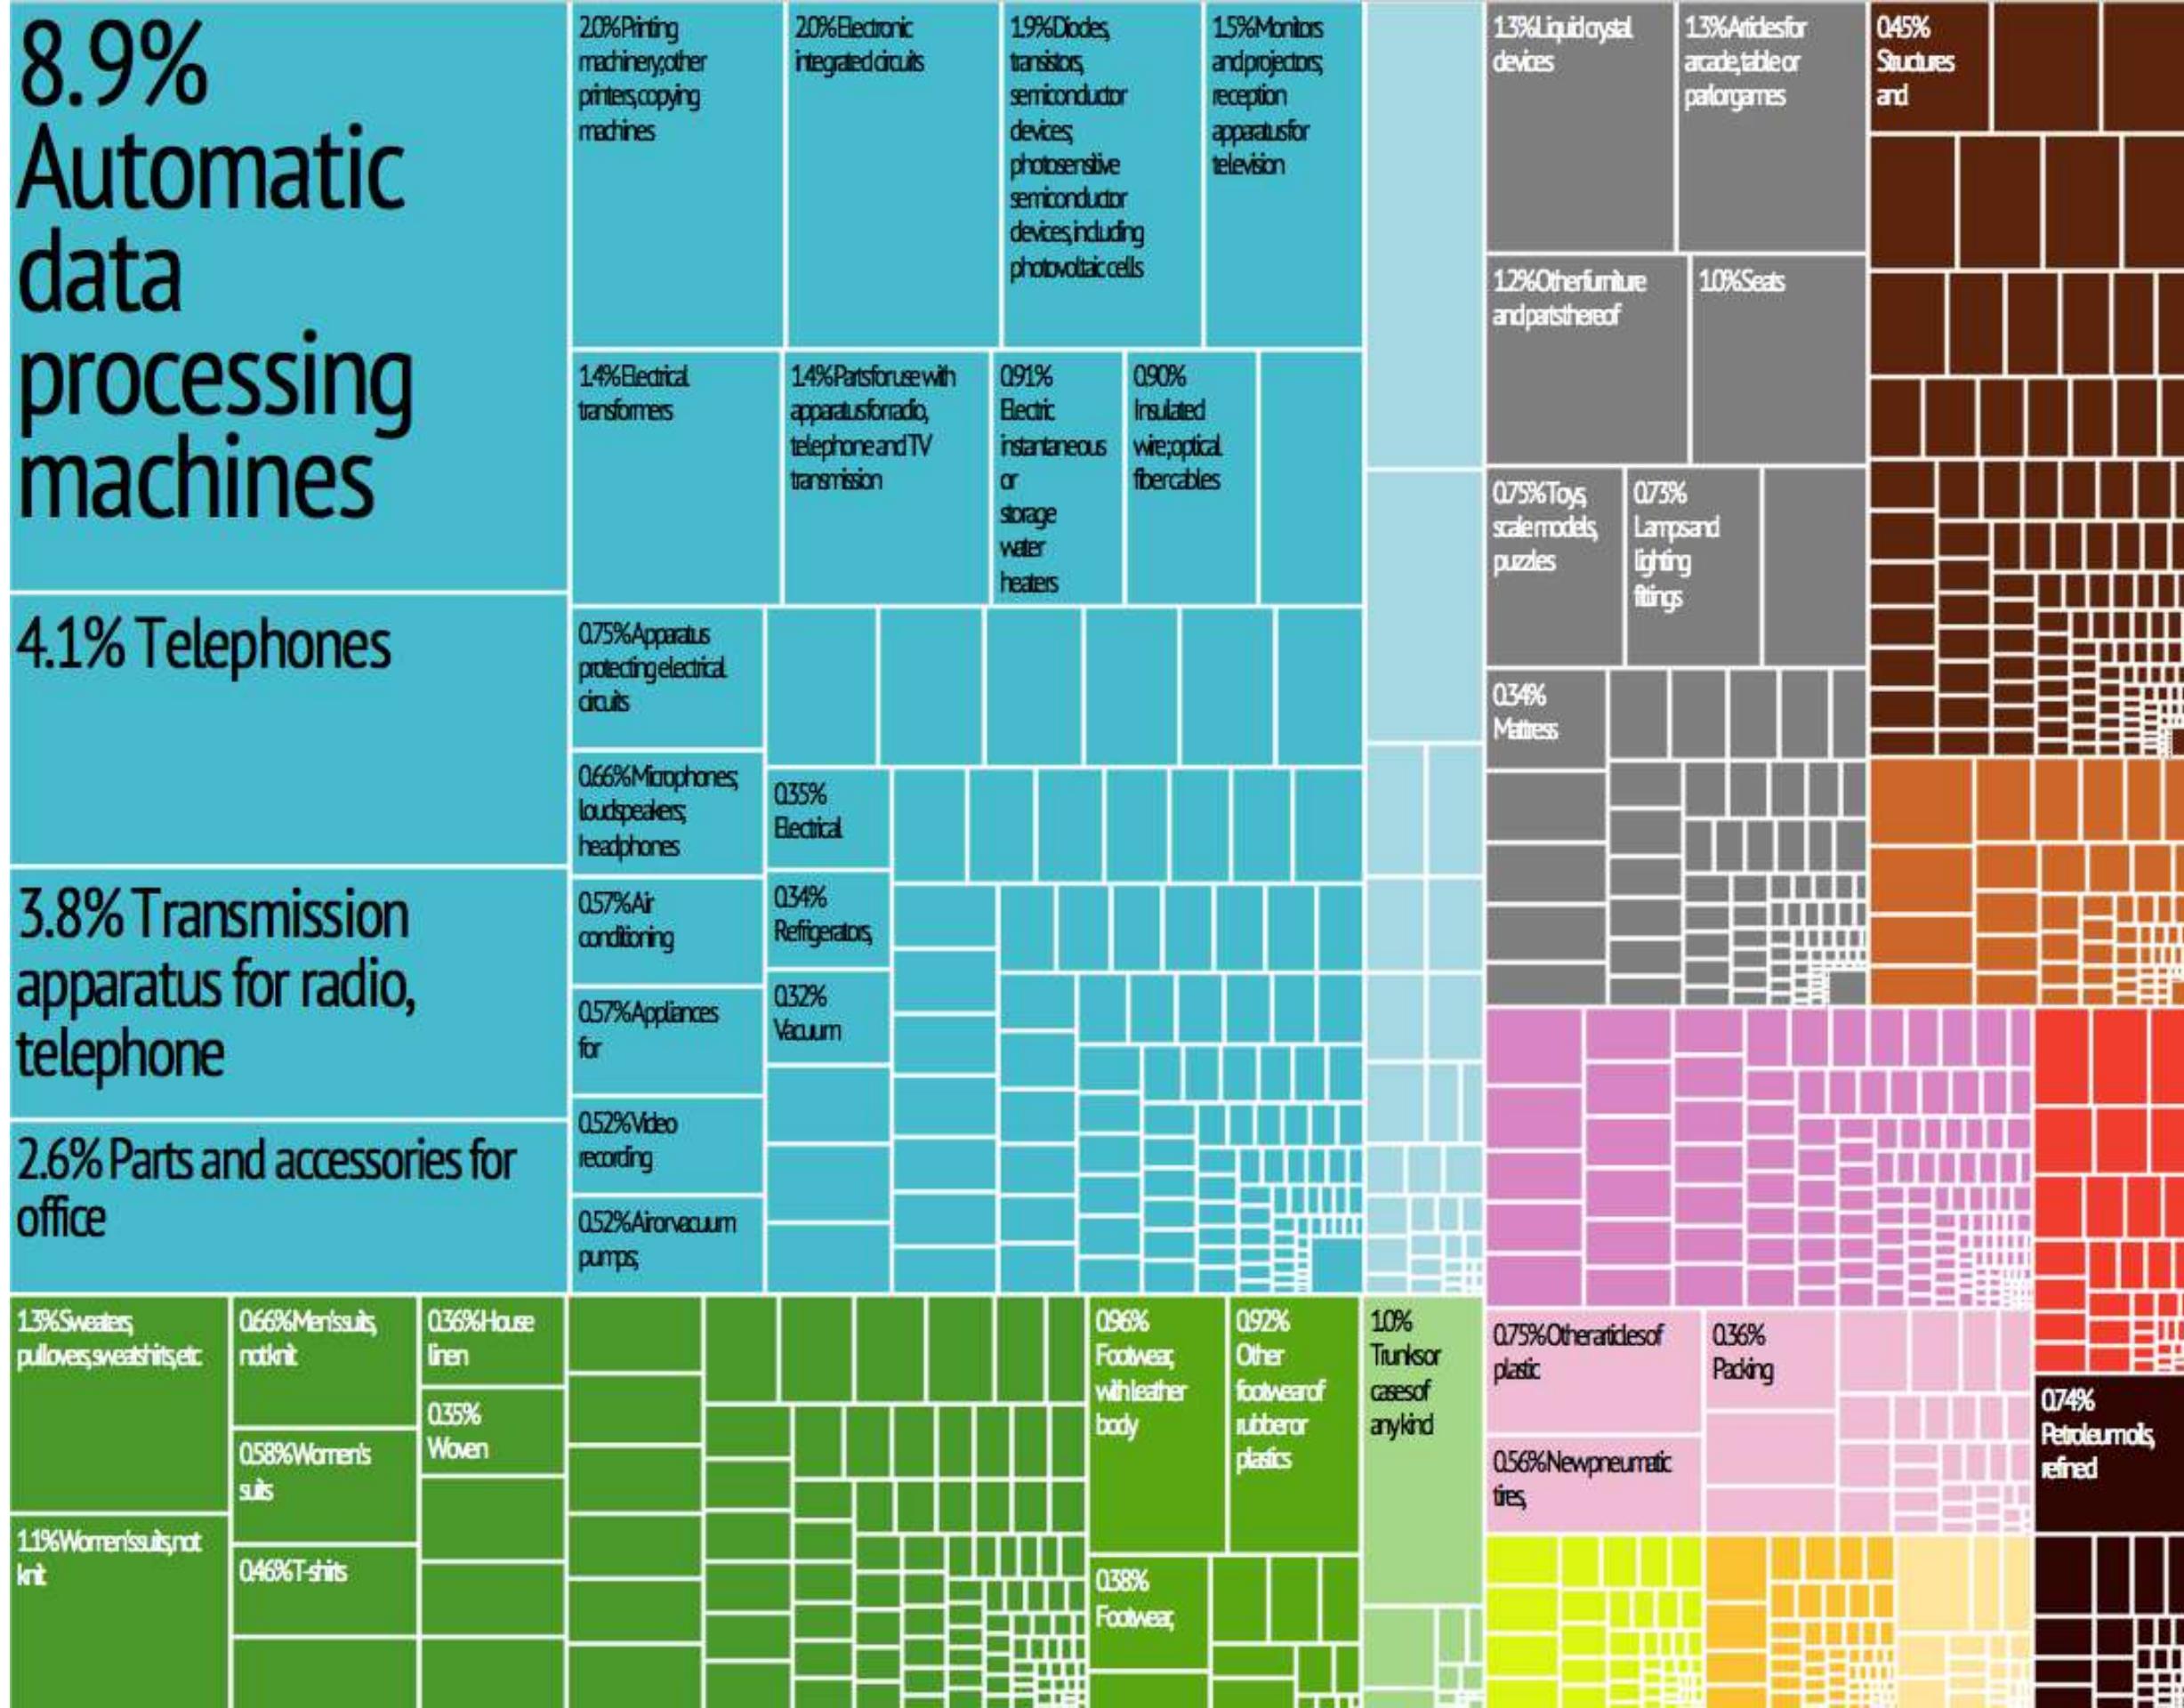

The black line across the red triangle in Nov. 1854 marks the boundary of the deaths from all other causes during the month.

In October 1854, & April 1855, the black area coincides with the red; in January & February 1856, the blue coincides with the black.

The entire areas may be compared by following the blue, the red & the black lines enclosing them.

Rules of Thumb

- Axes should
 - be consistent (among them and with user experience)
 - be well labeled
 - reach the origin for bar charts (and everywhere minus exceptional conditions)
- No unjustified 3D
 - Power of the plane
 - Disparity of depth
 - Occlusion hides information
 - Perspective distortion dangers
 - Tilted text isn't legible
- No unjustified 2D
- Eyes beat memory
- Resolution over immersion
- Overview first, zoom and filter, details on demand
- Responsiveness is required
- Function first, form next.

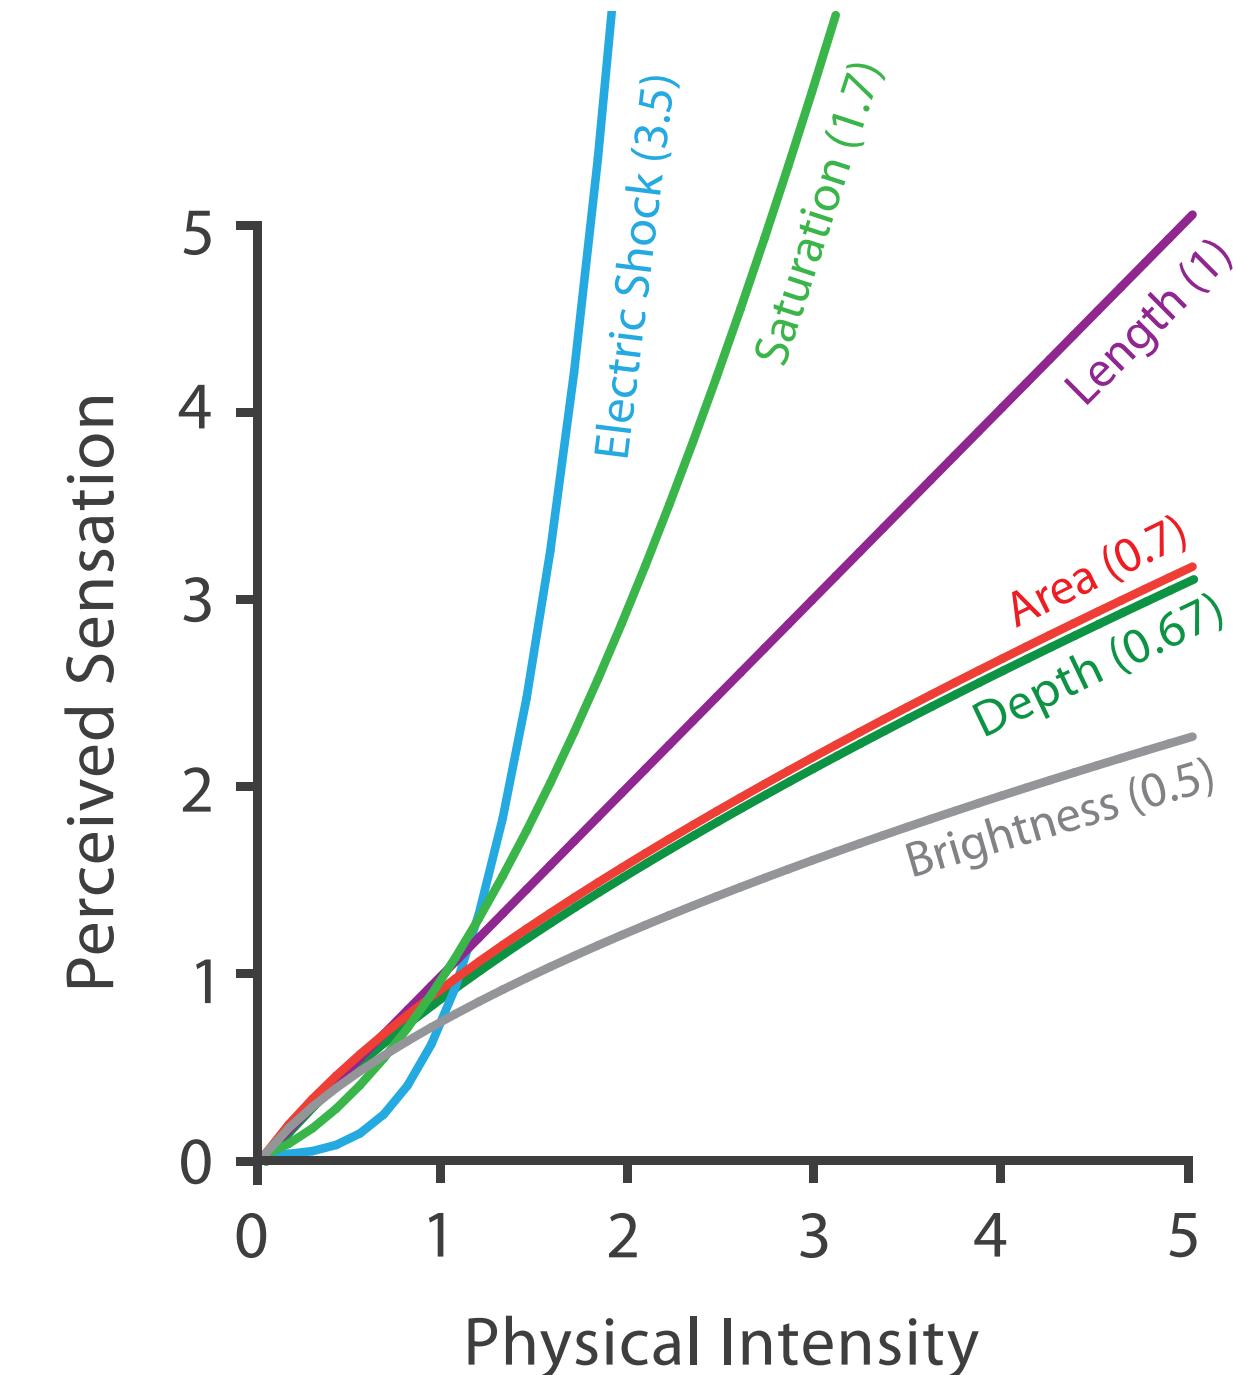

No unjustified 3D: Power of the plane

- high-ranked spatial position channels: **planar** spatial position
 - not depth!

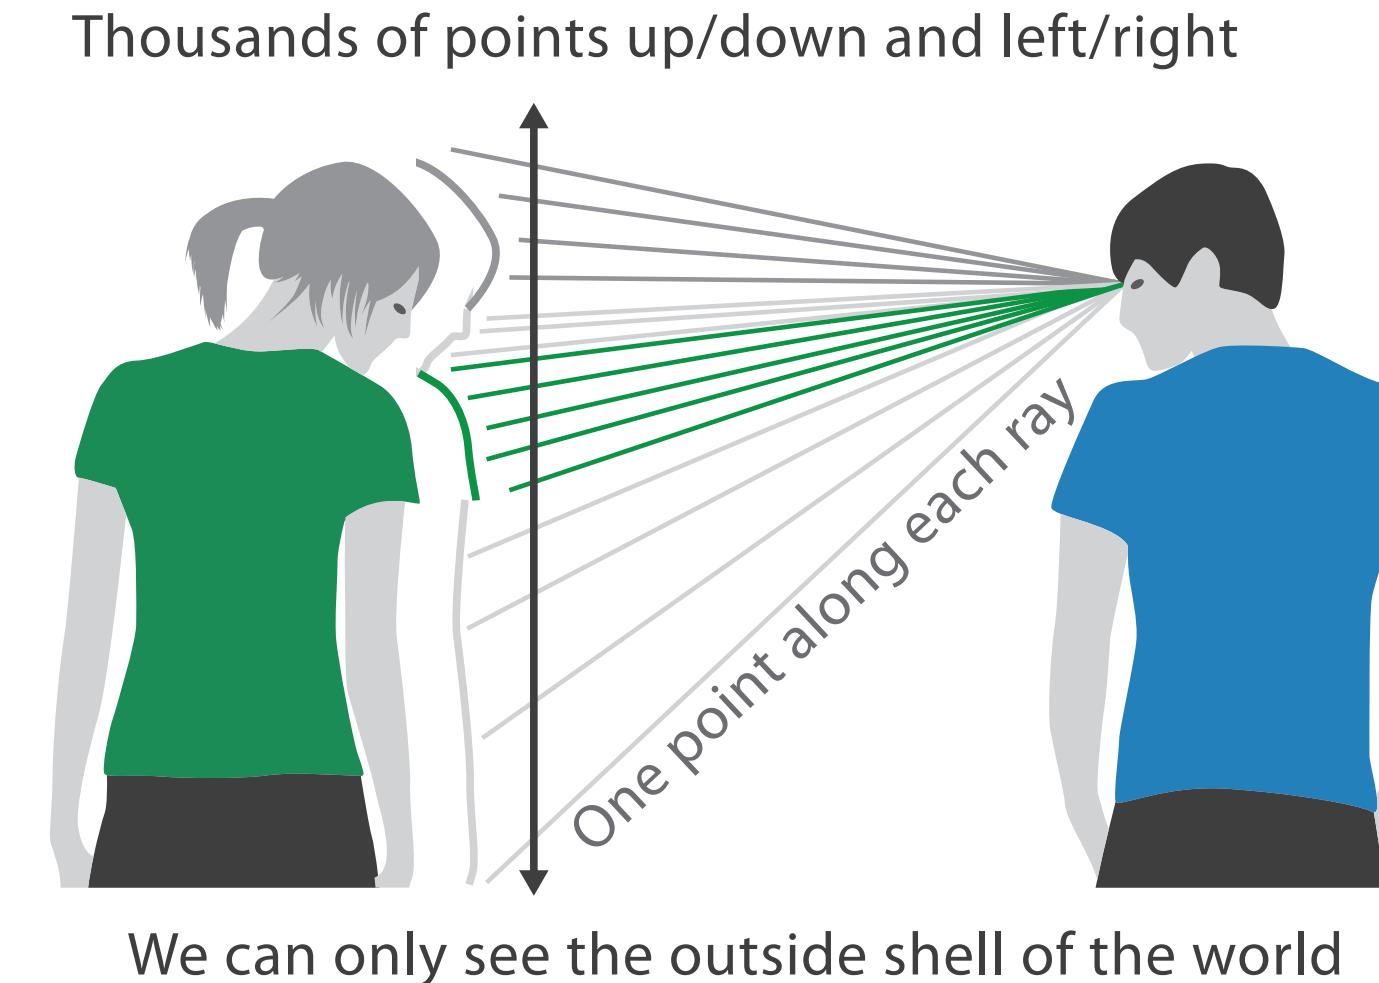

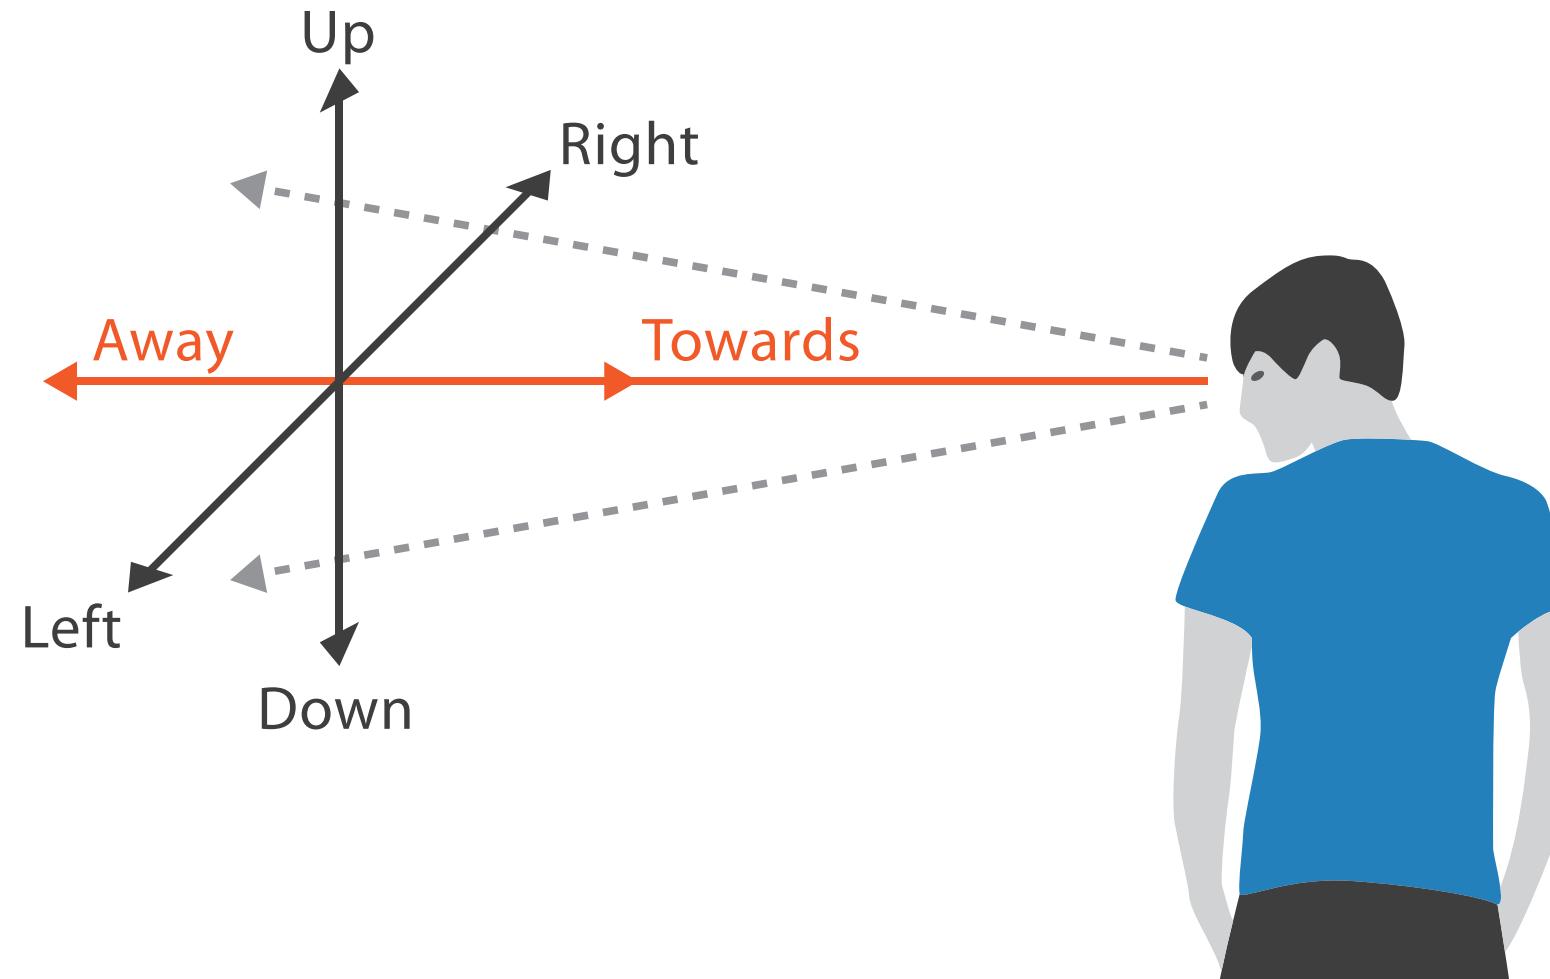

Steven's Psychophysical Power Law: $S = I^N$

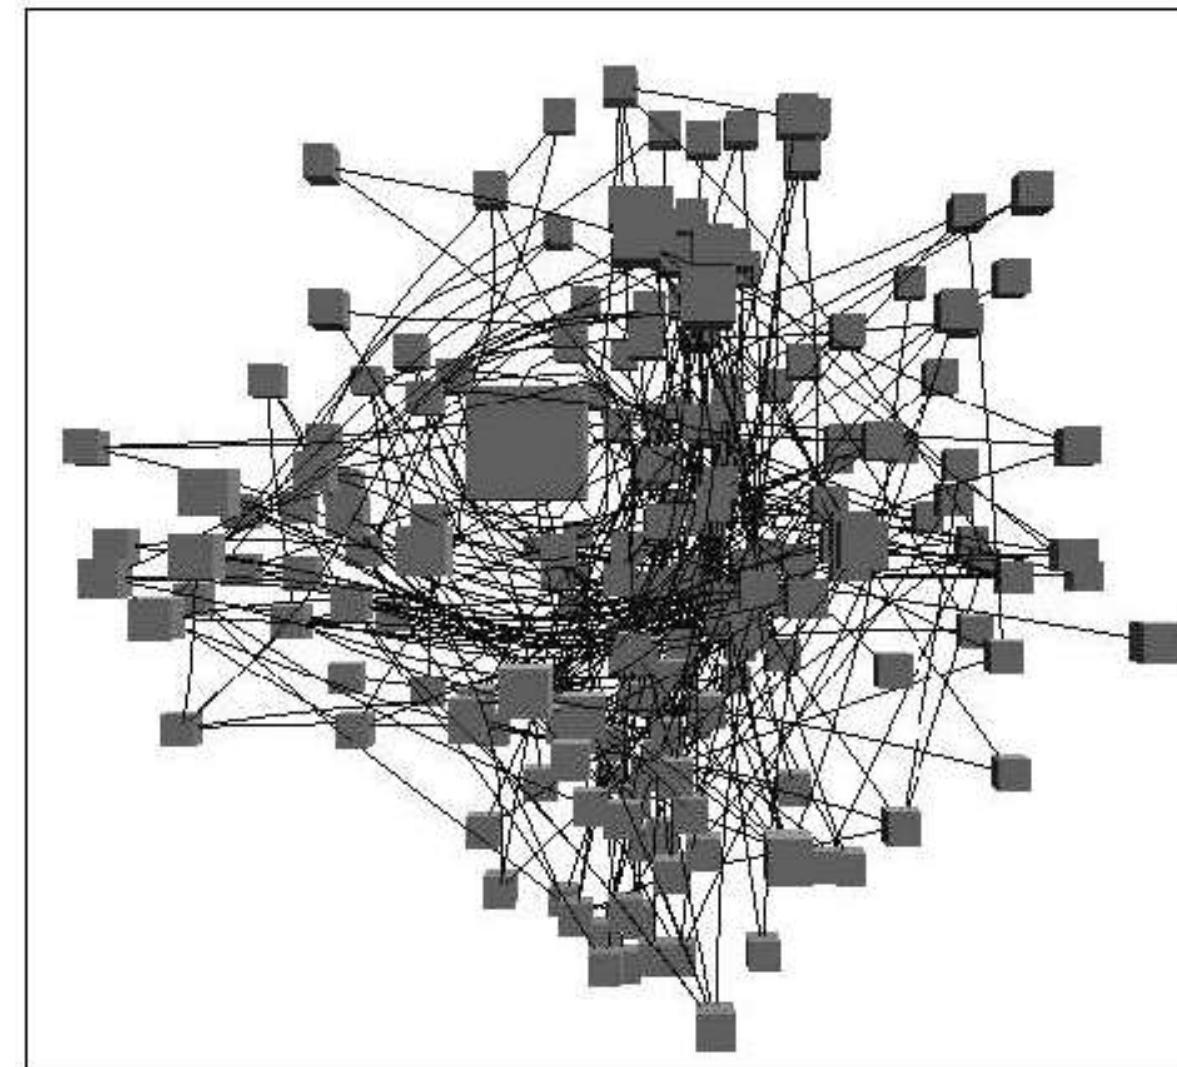

No unjustified 3D: Danger of depth

- we don't really live in 3D: we **see** in 2.05D
 - acquire more info on image plane quickly from eye movements
 - acquire more info for depth slower, from head/body motion

Occlusion hides information

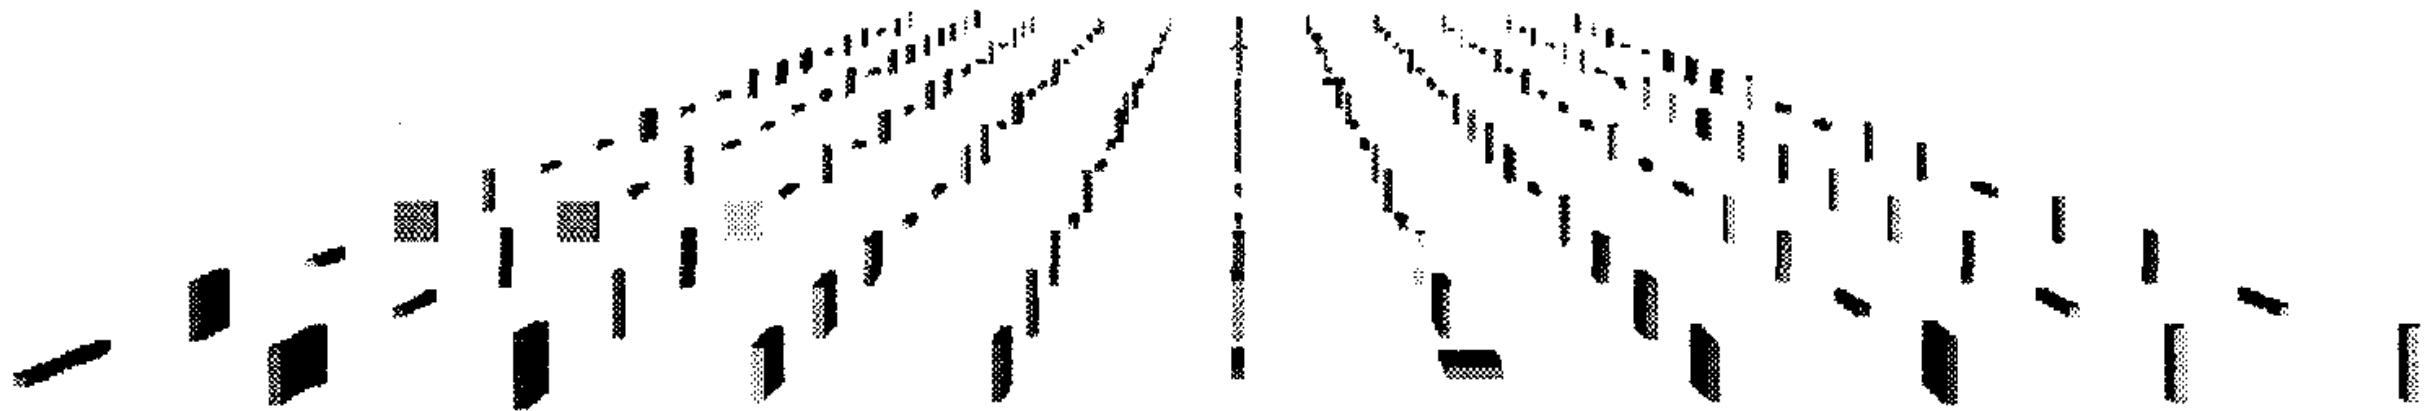

- occlusion
- interaction complexity

[*Distortion Viewing Techniques for 3D Data. Carpendale et al. InfoVis 1996.*]

Perspective distortion loses information

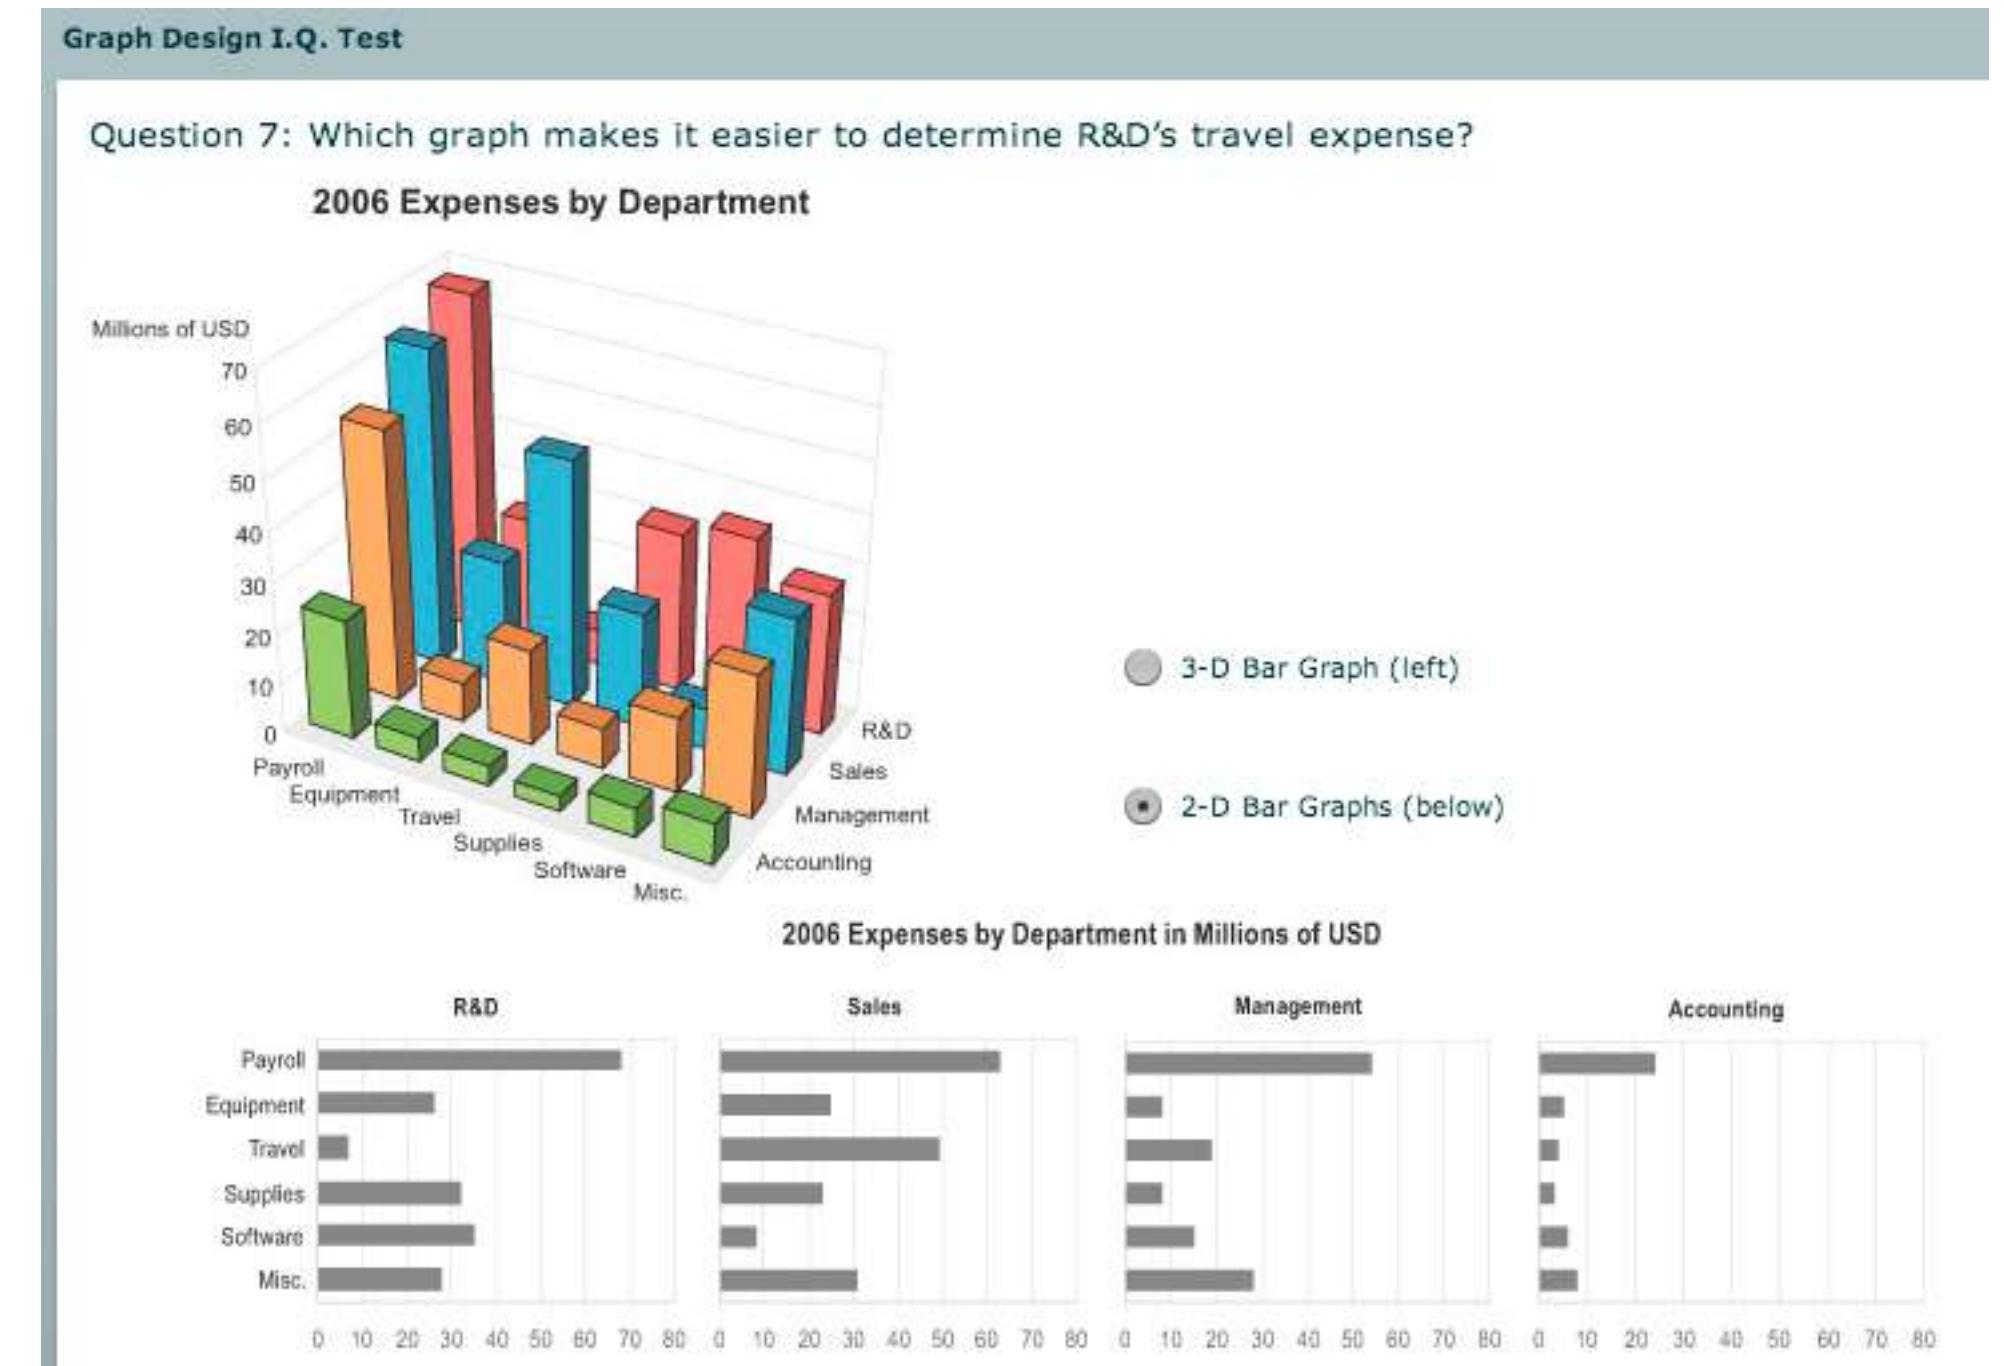

- perspective distortion
 - interferes with all size channel encodings
 - power of the plane is lost!

[Visualizing the Results of Multimedia Web Search Engines.
Mukherjea, Hirata, and Hara. InfoVis 96]

3D vs 2D bar charts

- 3D bars never a good idea!

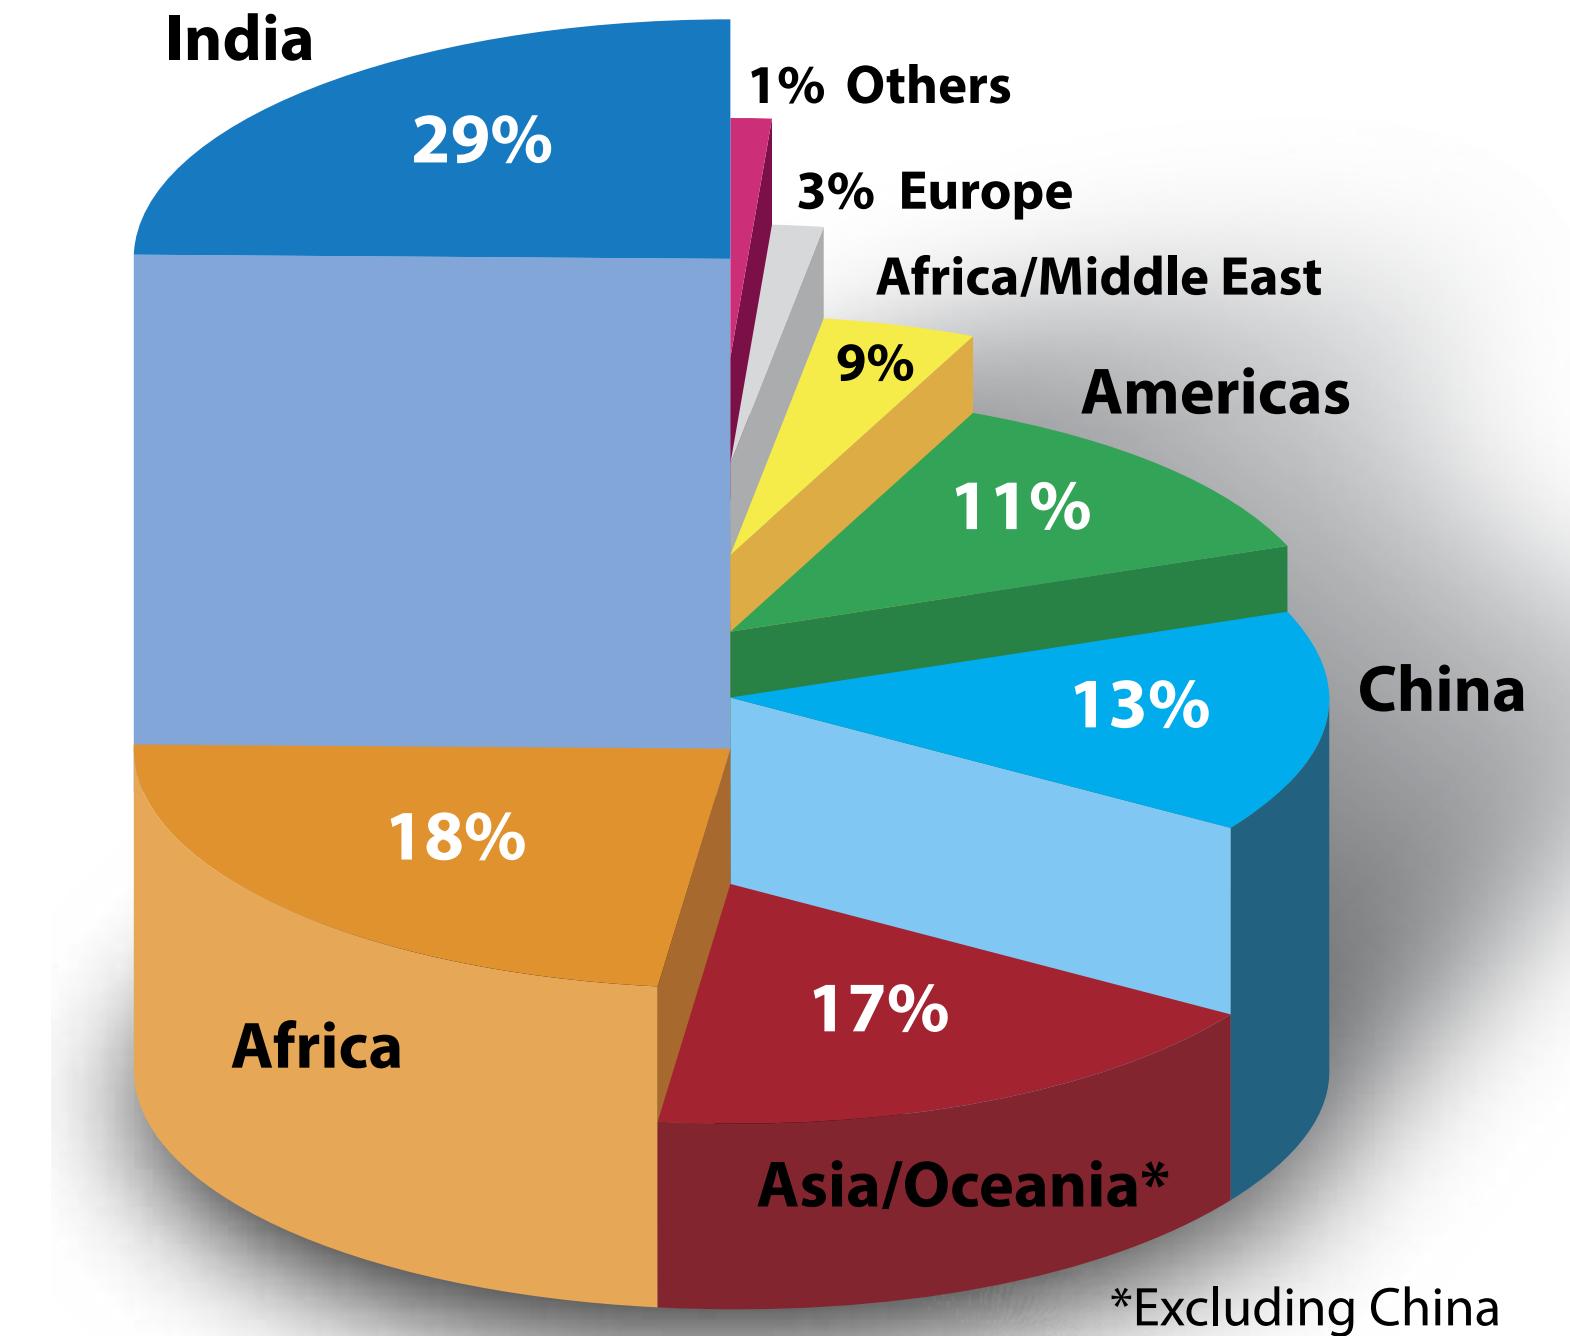

[<http://perceptualedge.com/files/GraphDesignIQ.html>]

3D vs 2D bar charts

- 3D bars never a good idea!

Share of worldwide urban population growth 2010-2050

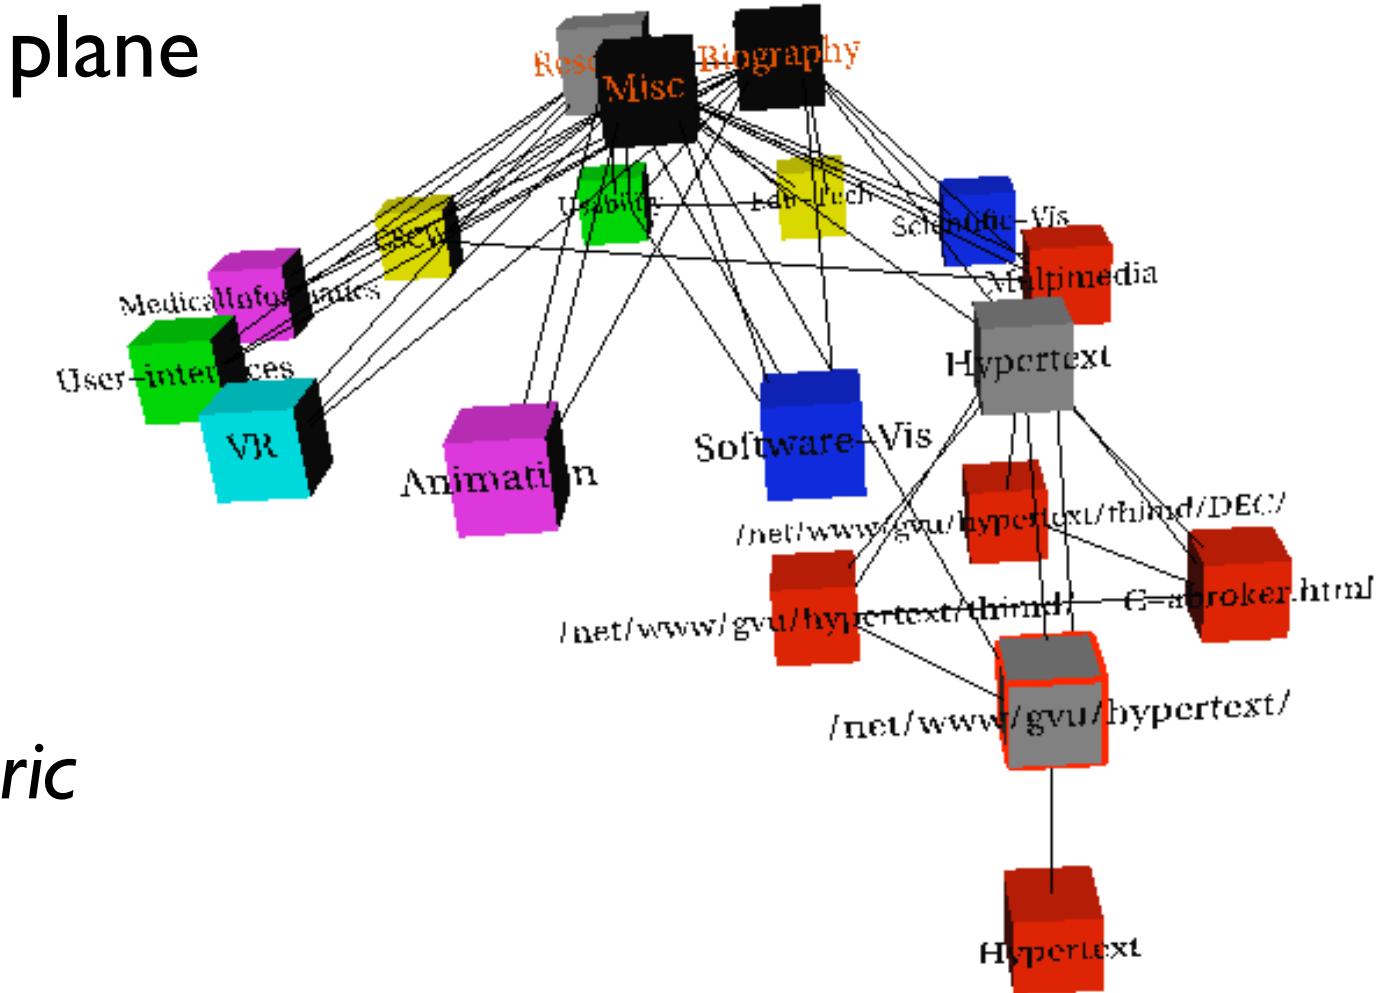

Tilted text isn't legible

- text legibility
 - far worse when tilted from image plane

- further reading

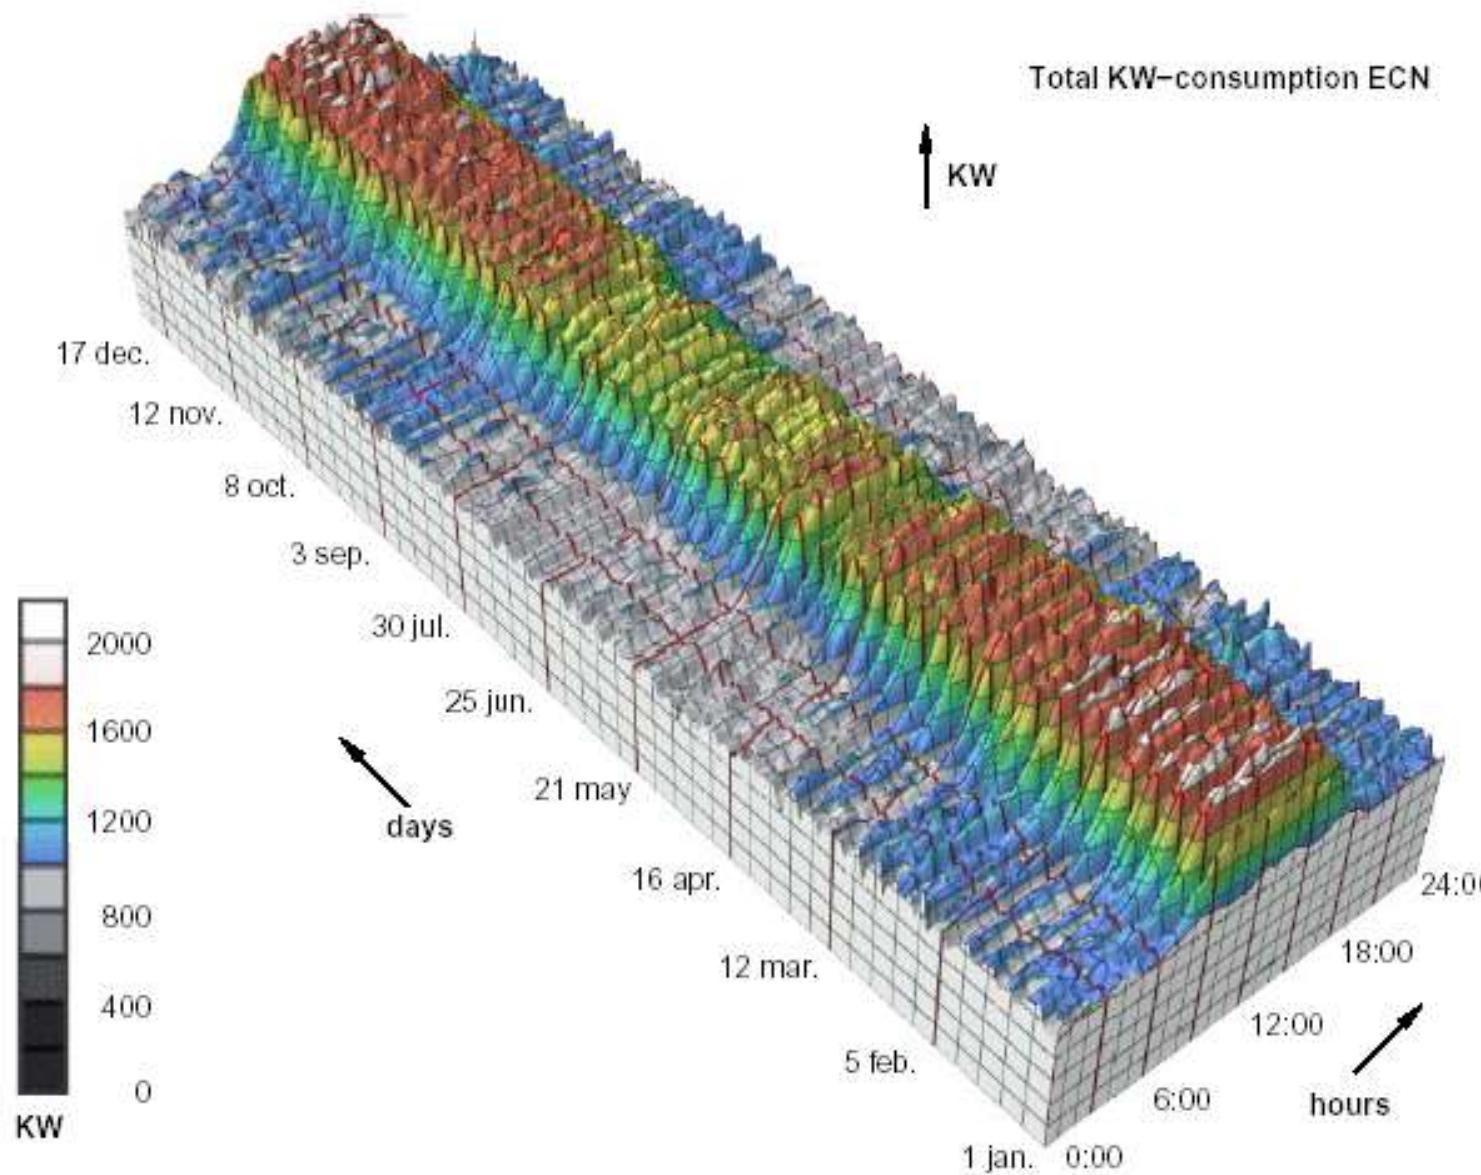

*[Exploring and Reducing the Effects of
Orientation on Text Readability in Volumetric
Displays.
Grossman et al. CHI 2007]*

*[Visualizing the World-Wide Web with the Navigational View Builder.
Mukherjea and Foley. Computer Networks and ISDN Systems,
1995.]*

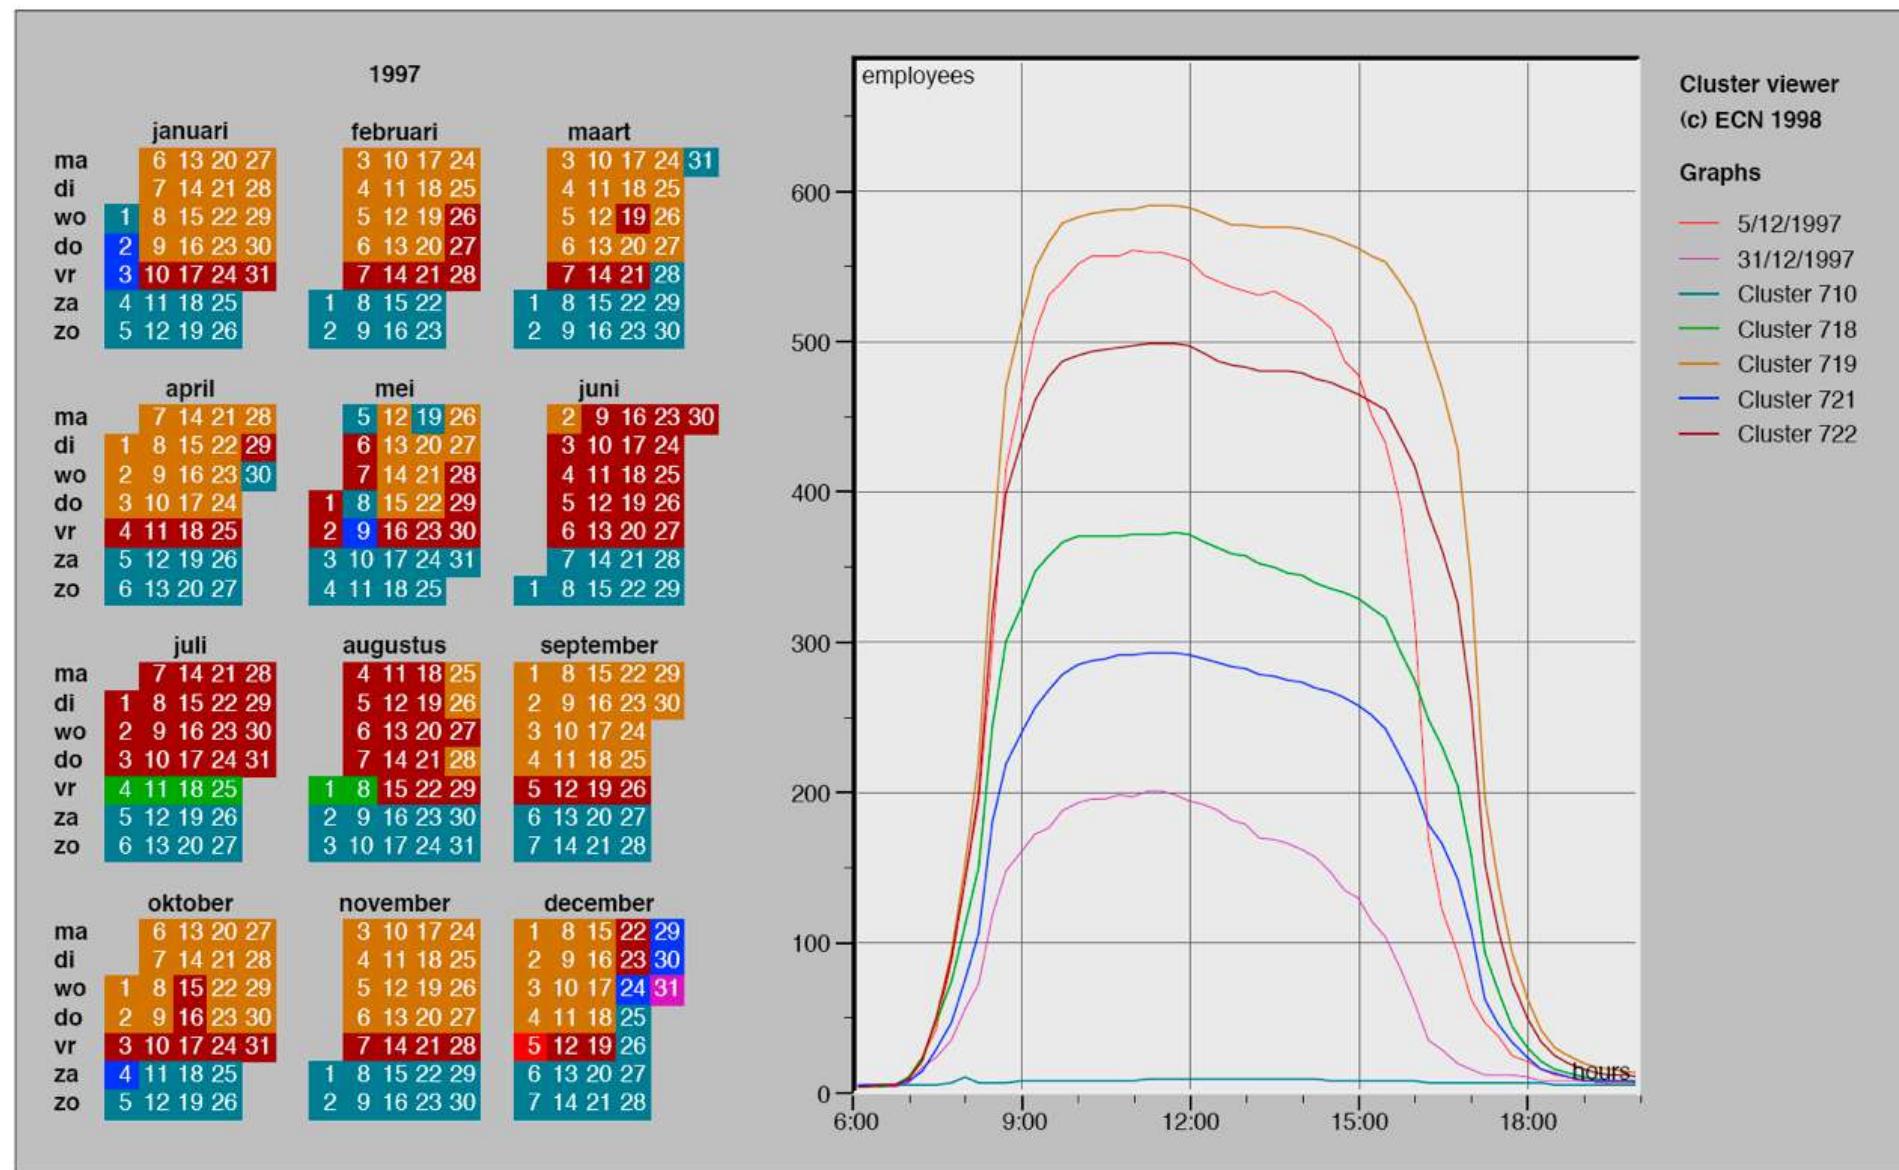

No unjustified 3D example: Time-series data

- extruded curves: detailed comparisons impossible

No unjustified 3D example: Transform for new data abstraction

- derived data: cluster hierarchy
- juxtapose multiple views: calendar, superimposed 2D curves

[Cluster and Calendar based Visualization of Time Series Data. van Wijk and van Selow, Proc. InfoVis 99.]

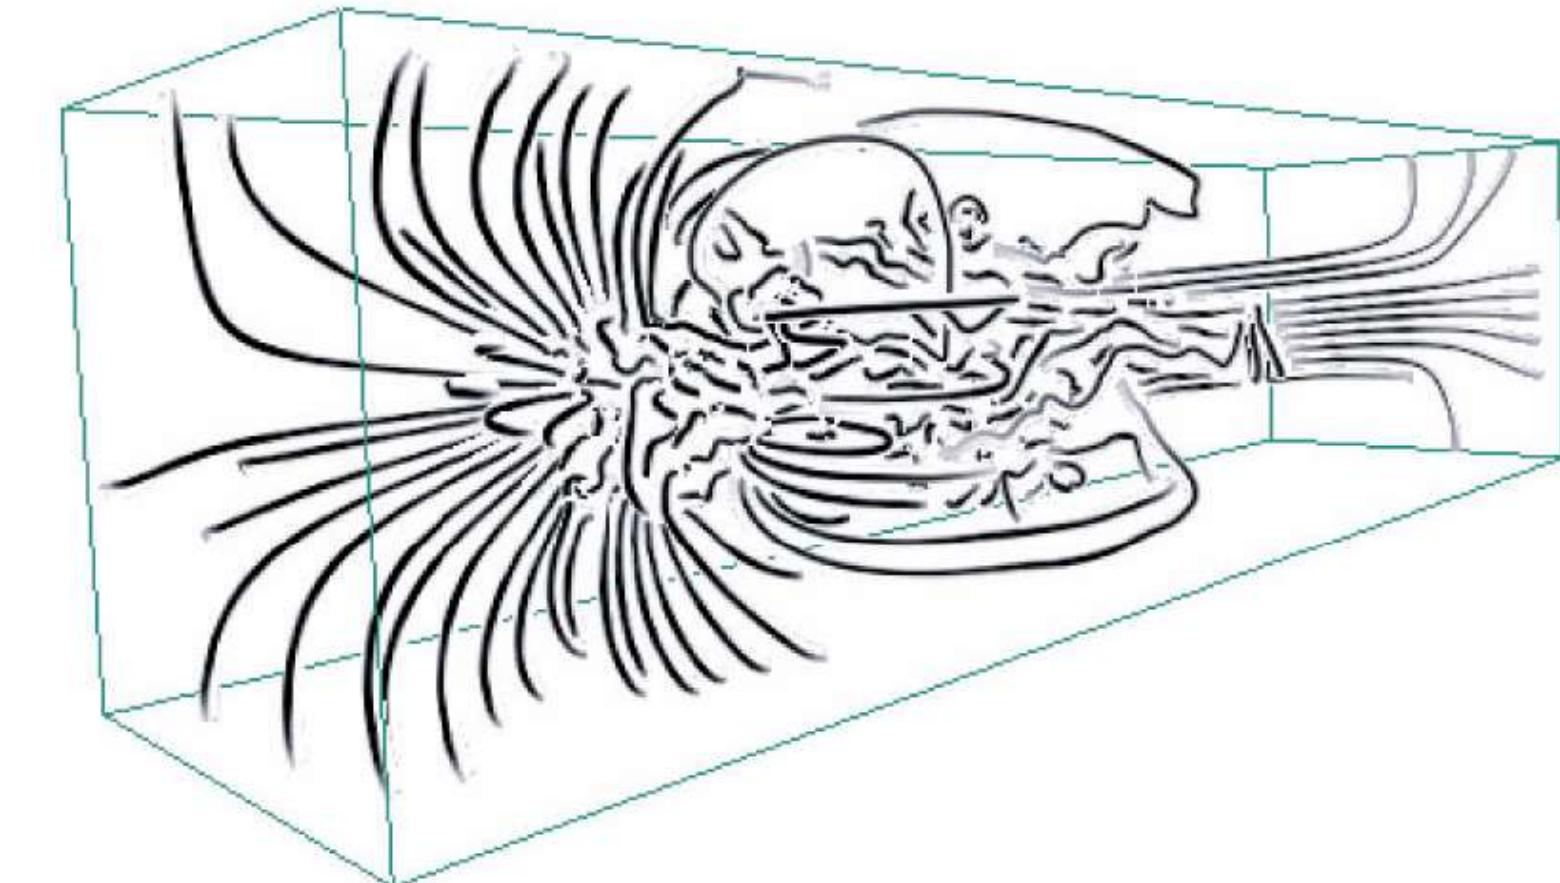

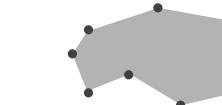

Justified 3D: shape perception

- benefits outweigh costs when task is shape perception for 3D spatial data
 - interactive navigation supports synthesis across many viewpoints

Targets

→ Spatial Data

→ Shape

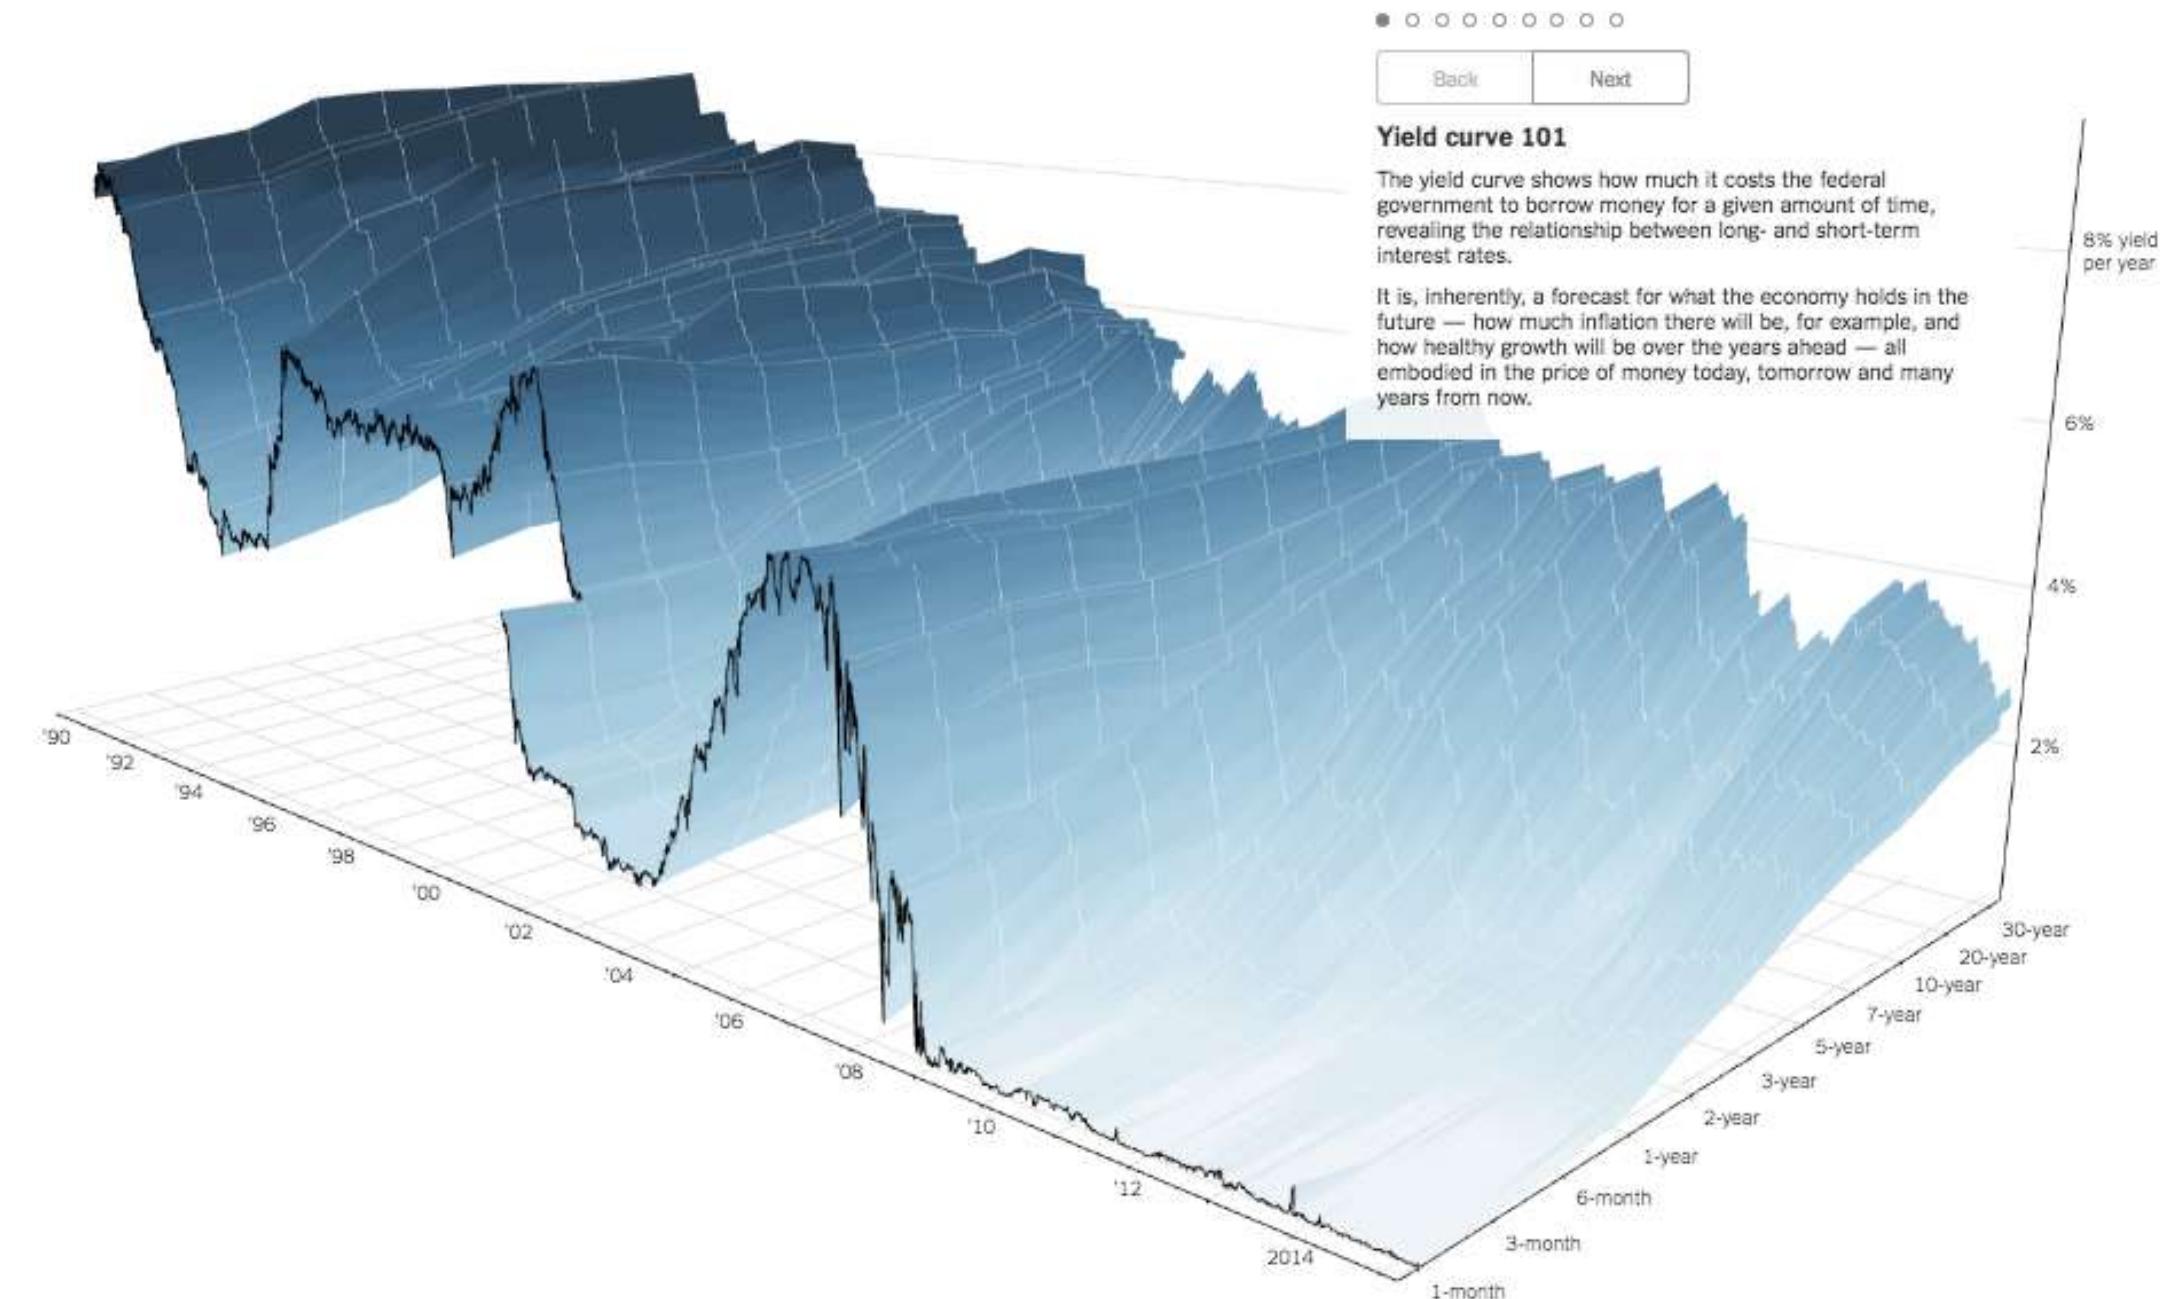

[Image-Based Streamline Generation and Rendering. Li and Shen. IEEE Trans. Visualization and Computer Graphics (TVCG) 13:3 (2007), 630–640.]

Justified 3D: Economic growth curve

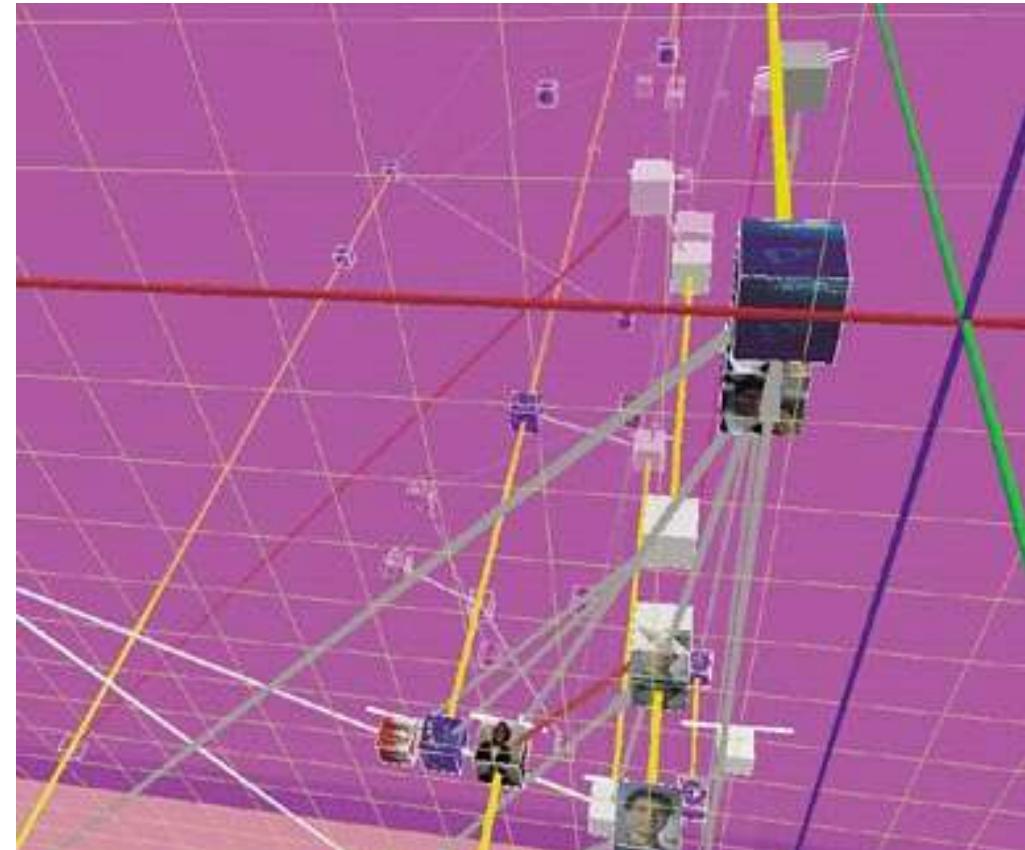

A 3-D View of a Chart That Predicts The Economic Future: The Yield Curve

By GREGOR AISCH and AMANDA COX MARCH 18, 2015

No unjustified 3D

- 3D legitimate for true 3D spatial data
- 3D needs very careful justification **for abstract data**
 - enthusiasm in 1990s, but now skepticism
 - be especially careful with 3D for point clouds or networks

[WEBPATH-a three dimensional Web history. Frecon and Smith. Proc. InfoVis 1999]

No unjustified 2D

- consider whether network data requires 2D spatial layout
 - especially if reading text is central to task!
 - arranging as network means lower information density and harder label lookup compared to text lists
- benefits outweigh costs when topological structure/context important for task
 - be especially careful for search results, document collections, ontologies

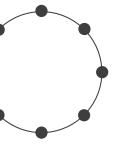

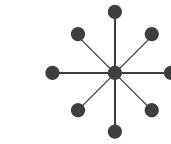

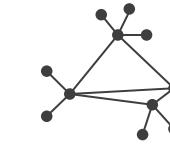

Targets

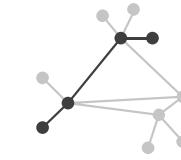

Network Data

Topology

→ Paths

Eyes beat memory

- principle: external cognition vs. internal memory
 - easy to compare by moving eyes between side-by-side views
 - harder to compare visible item to memory of what you saw
- implications for animation
 - great for choreographed storytelling
 - great for transitions between two states
 - poor for many states with changes everywhere
 - consider small multiples instead

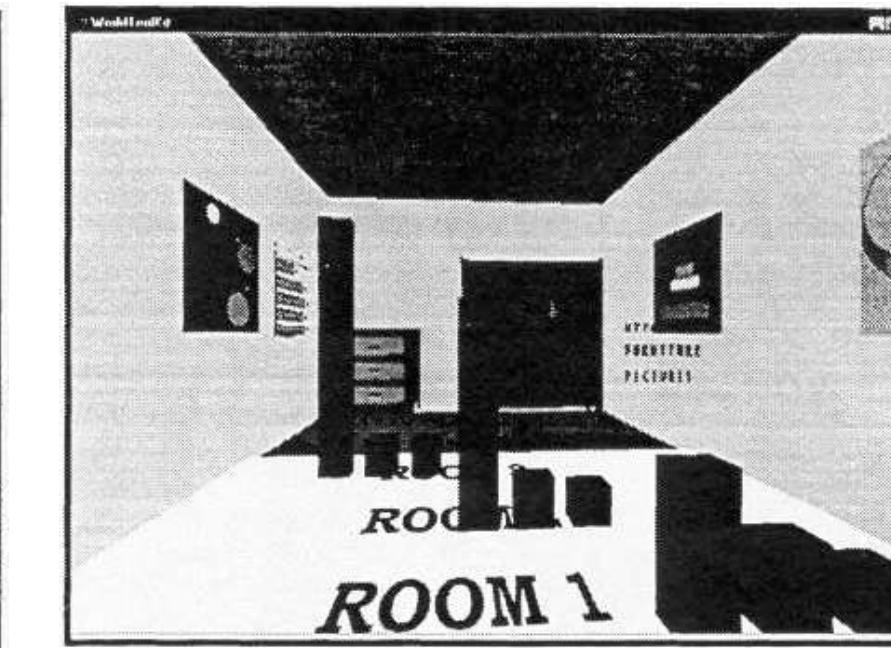

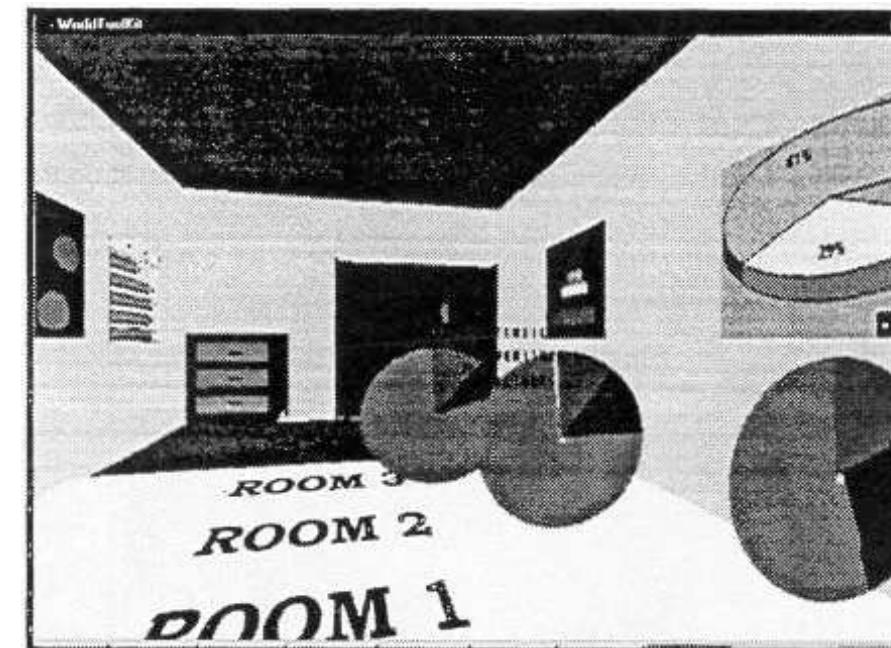

Change blindness

- if attention is directed elsewhere, even drastic changes not noticeable
 - door experiment
- change blindness demos
 - mask in between images

<https://www.youtube.com/watch?v=VkrVozZR2c>

Resolution beats immersion

- immersion typically not helpful **for abstract data**
 - do not need sense of presence or stereoscopic 3D
- resolution much more important
 - pixels are the scarcest resource
 - desktop also better for workflow integration
- virtual reality for abstract data very difficult to justify

[Development of an information visualization tool using virtual reality. Kirner and Martins. Proc. Symp. Applied Computing 2000]

Function first, form next

- start with focus on functionality
 - straightforward to improve aesthetics later on, as refinement
 - if no expertise in-house, find good graphic designer to work with
- dangerous to start with aesthetics
 - usually impossible to add function retroactively

DEAR DATA - WEEK 07

A WEEK OF COMPLAINTS*

AND GENERAL GRUMPINESS
HOW TO READ IT: (I ~~THREW DOWN MY~~ PENS WHEN I FINISHED)

ALL COMPLAINTS IN CHRONOLOGICAL ORDER EXCEPT 'COMPLAINTS TO ME' BECAUSE (COMPLAINT #1) I MESSED UP THE ORDER + BY THAT TIME I HAD ALREADY SPENT 1.5 HOURS ON THIS... AARGH! AND (COMPLAINT #2) THIS PART OF THE DRAWING IS NOT SYMMETRICAL WHICH BOTHERS ME!

TYPE OF COMPLAINT:

WEATHER	HEALTH
HUSBAND	HUNGER
ANIMALS	MYSELF
FAMILY	TECHNOLOGY/ MEDIA
SOCIETY	MONEY
THE WORLD TODAY	INANIMATE OBJECTS
ACQUAINTANCES/	
STRANGERS	
MY APPEARANCE	TRANSPORT
FRIENDS	
WORK	THIS PEN (COMPLAINT #?) LEAKED + SMUDGED MY DRAWING + GOT ALL OVER MY HANDS! MY STUPID LEFT HAND!

MAIN STATS	
PRIVATE COMPLAINTS:	67
OUTWARD COMPLAINTS:	100
COMPLAINTS TO ME :	43
# OF PEOPLE WHO COMPLAINED TO ME:	5
# OF PEOPLE I COMPLAINED TO:	6
TOP COMPLAINER: MY DAD	
TOP COMPLAINEE: MY HUSBAND	
I COMPLAINED MOST ABOUT MY FAMILY (SORRY mom + dad) I LOVE YOU BOTH!	
+ SECOND MOST COMPLAINING ABOUT MY HUSBAND (SORRY STEVE I LOVE YOU!)	

*AND A WEEK OF COMPLAINTS ABOUT HOW I F*CKED UP THIS DRAWING! (COMPLAINT #5)

WEEK 51: privacy (please!)

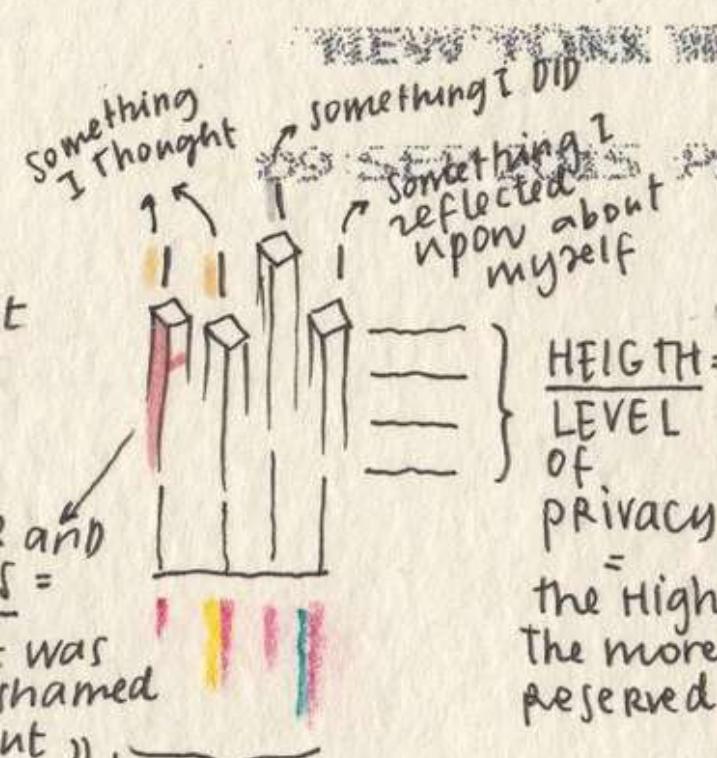

HOW TO READ IT:

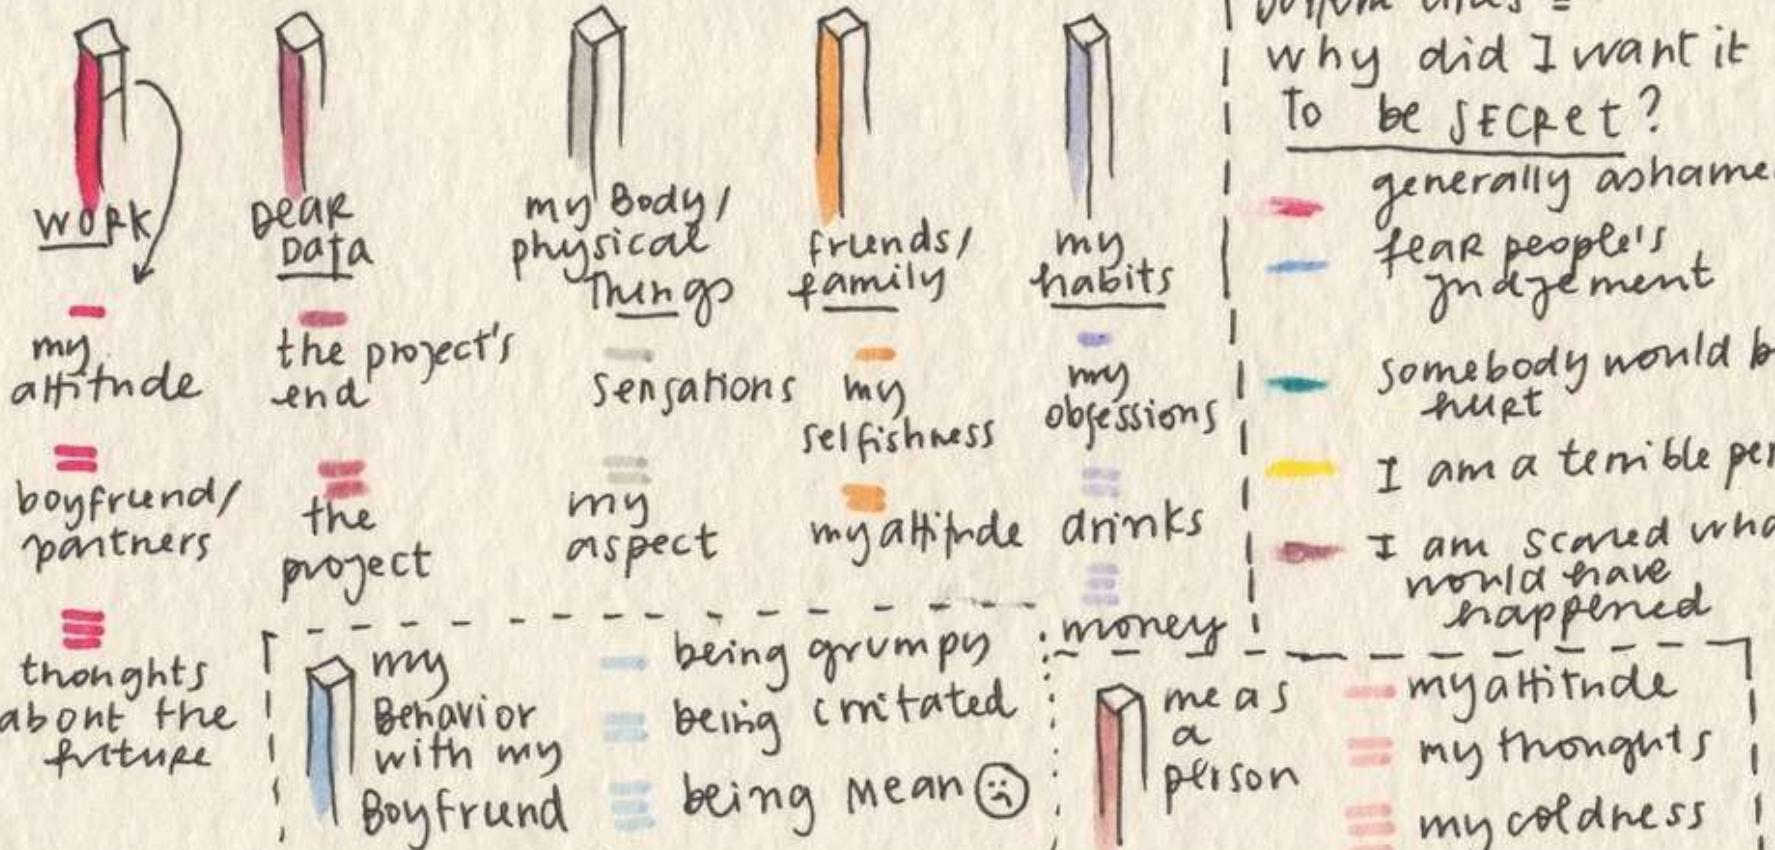

this week I tracked
EVERYTHING I DID, thought
or reflected upon that
I wouldn't wanna tell,
in chronologic order.

[--- = dashed
lines = documenting the FIRST
MASSIVE DATA VOID in Dear
Data = I forgot to track the
whole Monday morning ☺]

COLOR and
LINES =
What was
I "ashamed
about"

- Bottom lines = why did I want it to be SECRET?
- generally ashamed
- fear people's judgment
- somebody would be hurt
- I am a terrible person
- I am scared what would have happened
- my attitude
- my thoughts
- my coldness

Weather baskets

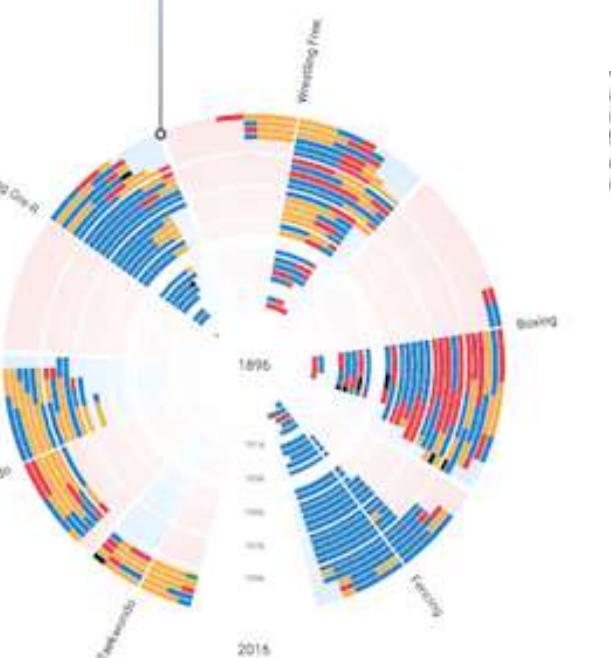

ASIA TAKES OVER IN 1964
The boycott of the Soviet Union and 16 other nations in the Los Angeles 1984 games is most notable in Gymnastics, which was dominated by the Soviet Union during those years. Japan and China took the place of Russia in winning most of the women's events. This was not the only boycott that happened during the Olympics' history.

BUSY 1920'S
The 1920 edition in Antwerp saw a large increase in the number of different events held. Never again could so many medals be won in archery, athletics, shooting, and sailing. Shooting had 21 events for men. Thankfully no live birds have been used for more than 100 years.

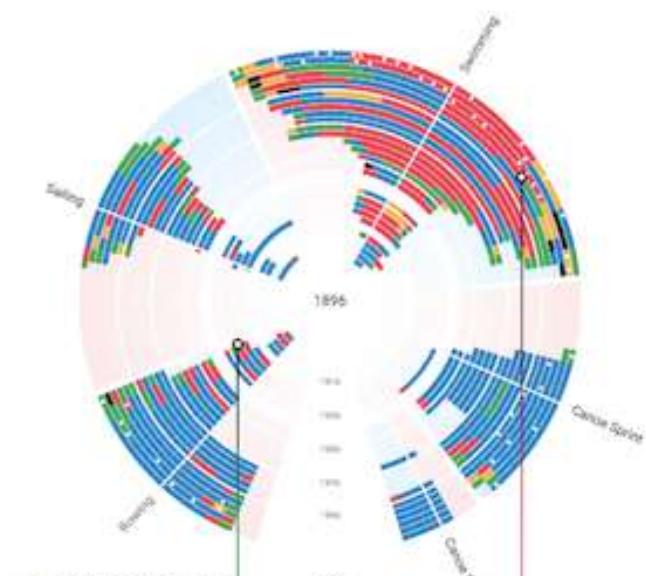

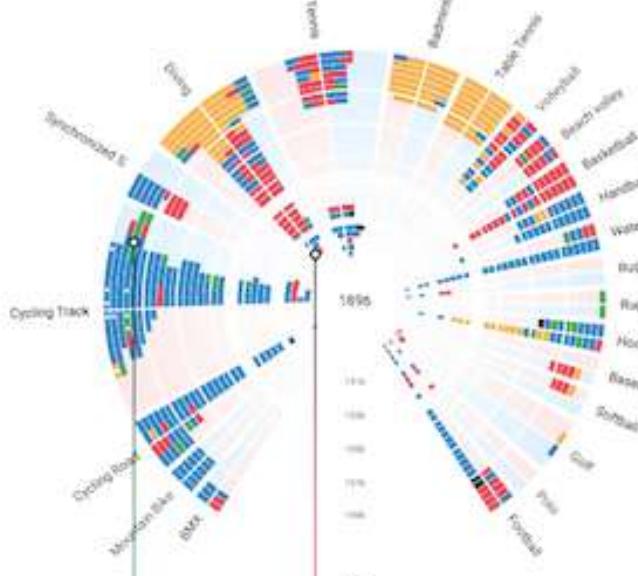

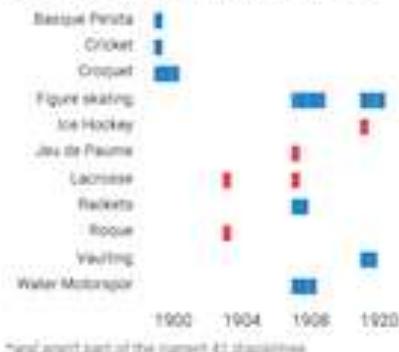

THE LAST AMATEURS
Wrestling is the last Olympic sport where the athletes still need to have an amateur status, for the safety of the participants. Boxing also required an amateur status until Rio 2016.

Henry Pearce's quarter final race to a family of ducks in front of his boat in 1928, Pearce in gold in the end.

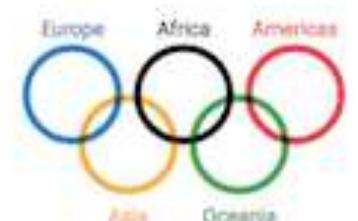

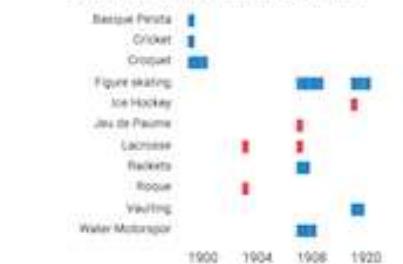

PHELPS' 1ST GOLD
Michael Phelps' first gold medal was won in the 400-meter individual medley in Athens, 2004. Out of the 16 men's swimming events during those games, Phelps took home 6 gold medals, of which 4 from individual races.

Winners of the 11 sports that competed in less than 2 editions

STOPPING FOR DUCKS
Henry Pearce stopped halfway through his quarter final race to give way to a family of ducks passing in front of his boat in 1928. Nevertheless, Pearce managed to win gold in the end.

Winners of the 11 sports that competed in less than 2 editions
